

TABLE OF CONTENTS

I	OVERVIEW - GENERAL INTRODUCTION	1
1	History of dissolution	3
2	Dissolution today	4
3	Biorelevance in dissolution testing	6
3.1	The GI Tract	6
3.2	Simulation of <i>in vivo</i> conditions	10
II	AIMS OF THESIS	13
1	Improvement of preparation of biorelevant media	13
2	Use of physiologic buffer systems	14
3	Miniaturization of dissolution testing.....	14
III	MANUFACTURE OF "INSTANT" BIORELEVANT MEDIA BY FREEZE-DRYING.....	15
1	Introduction	15
1.1	Reasons for Lyophilisation	15
1.2	Requirements for freeze-drying components	17
1.3	Freeze drying of biorelevant media	19
1.4	Lyophilisation – Physical basics	21
1.4.1	Process of lyophilisation	21
1.4.2	Freezing point	22
1.4.3	Freezing process of solutions.....	24
1.4.4	Freezing time	26
1.4.5	Primary drying / Sublimation	26
1.4.6	Secondary drying / Desorption	27
1.5	Lyophilisation – Technical Basics.....	28
2	Materials and Methods	30
2.1	Materials.....	30
2.1.1	Chemicals and formulations	30
2.1.2	Devices for production and testing	32

2.2	Methods	34
2.2.1	Compositions of solutions for freeze-drying	34
2.2.2	Preparation.....	35
2.2.3	Freeze-drying	38
2.2.4	Packaging and storage.....	40
2.2.5	Reconstitution	42
2.2.6	Characterization of physicochemical properties	42
2.2.7	Comparison of commercially available and freeze-dried instant media	45
3	Results	47
3.1	Preparation and lyophilisation of concentrated solutions.....	47
3.1.1	Preparation.....	47
3.1.2	Lyophilisation of various concentrates.....	52
3.1.3	Freeze-drying process.....	53
3.1.4	Packaging	54
3.1.5	Reconstitution	55
3.2	Characterization of Lyophilisates	56
3.2.1	Appearance	56
3.2.2	SEM (Scanning Electron Microscopy)	57
3.2.3	Hygroscopicity	59
3.2.4	Karl-Fischer-Titration.....	60
3.2.5	DSC (Differential Scanning Calorimetry)	63
3.3	Properties of reconstituted vs freshly prepared media	63
3.4	Characterization of the redissolved media after storage	67
3.4.1	Optical appearance	68
3.4.2	Physicochemical properties.....	68
3.5	Comparison of commercially available and freeze-dried instant media	76
3.5.1	Physicochemical characterization	76
3.5.2	Dissolution results	78
4	Discussion.....	81
4.1	Preparation of the lyophilised media	81
4.1.1	Preparation and freeze-drying of concentrated solutions	81
4.1.2	Comparison of freeze-dried with freshly prepared media	89
4.1.3	Characterization of the lyophilisate.....	90
4.1.4	Characterization of redissolved media	91
4.1.5	Stability, storage and packaging	94
4.1.6	Applicability in an industrial setting.....	95

Table of contents

4.2	Comparison of commercially available and freeze-dried instant media.....	95
5	Summary and conclusion	97
6	Acknowledgement	97
7	Standard operation procedure (SOP) for the preparation of freeze dried FaSSIF and FeSSIF	98
7.1	Composition	98
7.2	Instant media.....	98
7.3	Preparation.....	98
7.4	Storage.....	99
IV	IMPROVEMENT OF BIORELEVANCE BY SUBSTITUTING CONVENTION BUFFER SALT FOR BICARBONATE BUFFER IN BIORELEVANT MEDIA FASSIF AND FESSIF	101
1	Introduction	101
2	Materials and methods	104
2.1	Materials.....	104
2.1.1	Chemicals and formulations	104
2.1.2	Media	104
3	Methods	107
3.1.1	Dissolution Tests	107
3.1.2	Statistical Methods	108
4	Results and discussion.....	109
4.1	Preparation of bicarbonate buffers	109
4.1.1	McNamara Method.....	109
4.1.2	Modified Method.....	110
4.2	Reproducibility of dissolution profiles in media based on bicarbonate and phosphate buffers.....	112
4.3	Ability of bicarbonate and phosphate buffers to resist pH change.....	115
4.4	Biorelevant media composed with bicarbonate vs. phosphate	118
4.5	Statistical Analysis.....	119
5	Conclusion	120
6	Acknowledgement.....	120

V	MINIATURIZATION OF DISSOLUTION DEVICES.....	121
1	Introduction	121
1.1	Dissolution in the pharmaceutical industries	121
1.2	Standard dissolution testing	123
1.3	Physiological small volume dissolution testing	124
1.3.1	Choice of volume.....	124
1.3.2	Buffer type and strength	125
1.3.3	pH value	125
1.3.4	Mini-Paddle Apparatus	126
1.3.5	Sample removal with the Mini-Paddle Apparatus	126
1.4	Small scale dissolution testing	126
1.4.1	Manual vial method	127
1.4.2	Automated vial system	127
1.4.3	BI miniDiss	128
1.5	Well-plate method	129
1.6	Compatibility of the various methods.....	131
1.7	Correlation of <i>in vitro</i> and <i>in vivo</i> release	131
2	Materials and methods	133
2.1	Materials.....	133
2.1.1	Chemicals and formulations	133
2.1.2	Dissolution media for compatibility tests.....	135
2.1.3	Dissolution media for buffer screening	136
2.1.4	Devices for dissolution and testing	136
2.2	Dissolution Methods	137
2.2.1	Modified USP apparatus	139
2.2.2	Manual vial method	140
2.2.3	Automated vial method.....	140
2.2.4	BI miniDiss	140
2.2.5	Well plate	141
2.3	Use of BI miniDiss for buffer screening of BI 20 for the formulation characterization	141
2.4	IVIVR.....	141
3	Results	143
3.1	Compatibility of methods	143

Table of contents

3.1.1	Vial methods	143
3.1.2	Modified USP vs. automated vial method.....	144
3.1.3	Modified USP vs. BI miniDiss.....	145
3.1.4	BI miniDiss vs. well-plate method.....	146
3.2	Buffer screening	152
3.3	IVIVR.....	155
3.3.1	Results for BIBF	155
3.3.2	Results of BIXX	157
4	Discussion.....	158
4.1	Compatibility of methods	159
4.1.1	Vial methods	159
4.1.2	Modified USP vs. vial method	159
4.1.3	Modified USP vs. BI miniDiss.....	160
4.1.4	BI miniDiss vs. well-plate method.....	160
4.2	Buffer Effects.....	162
4.3	IVIVR.....	163
4.3.1	Results of BIBF	163
4.3.2	Results of BIXX	164
5	Conclusion	165
VI	SUMMARY	167
VII	ZUSAMMENFASSUNG	171
VIII	APPENDIX.....	174
IX	REFERENCES	175
X	CURRICULUM VITAE	192
