1	Introduction	1
2	Theory of Current-Induced Magnetization Switching	5
2.1	Spin filtering and spin torque generation	5
2.2	Magnetization reversal due to spin-torque effects	10
2.3	Finite-temperature effects	13
3	Scanning Tunneling Microscopy	17
3.1	The tunneling effect	18
3.2	Experimental aspects	19
3.3	Surface topography	20
3.4	Electronic properties	21
3.5	Spin-polarized scanning tunneling microscopy	23
4	Instrumentation and Preparation	27
4.1	The UHV system	27
4.2	The variable-temperature scanning tunneling microscope	30
4.3	Tip preparation	32
4.4	Preparation of W(110) substrates	32
5	Growth and Magnetism of Fe/W(110)	35
5.1	Growth	35
5.2	Magnetism	36
5.3	Topography and magnetism of iron nanoislands	37
6	Thermally Induced Magnetization Switching of Nanoislands	39
6.1	Observation of thermally induced magnetization switching	39
6.2	Data analysis techniques	42
6.3	Experimental results	43
6.4	Model for magnetization reversal of nanoislands	47
6.5	Determination of exchange stiffness and magnetic anisotropy	49

7	Current-induced Magnetization Switching of Nanoislands	55
7.1	SP-STM in the high tunnel current regime	55
7.2	Spin torque effects on thermally switching nanoislands	58
7.3	Bias-dependent spin-torque	60
7.4	Separation of Joule heating and spin torque contributions	63
7.5	Oersted field contributions	68
8	Switching the Magnetization of Quasistable Nanoislands	73
8.1	Nanoisland in the low-frequency regime	73
8.2	Quasistable nanoisland	75
9	Summary and Perspectives	81
	Bibliography	85
	Publications	91
	Conferences	92
