TABLE OF CONTENTS

Acknowledgements	i
Table of contents	iii
1 General introduction	1
1.1 Erosion effects soil nutrient and crop production	1
1.2 The role of soil conservation measures in erosion control.....	3
1.3 The disadvantage of soil conservation measures	4
1.4 Erosion modelling	5
1.5 WaNuLCAS modelling	6
1.6 Objectives.....	7
1.7 Outline of the study	8
1.8 References	9
2 Changes in the relationship between soil erosion and N loss pathways after establishing soil conservation systems in uplands of Northeast Thailand.....	13
2.1 Introduction	15
2.2 Materials and Methods	17
2.2.1 Site description	17
2.2.2 Experimental design	18
2.2.3 Runoff and soil loss measurement	19
2.2.4 Nitrogen leaching.....	20
2.2.5 Maize grain and stover yields	21
2.2.6 Statistical analysis.....	21
2.3 Results	22
2.3.1 Yield response of maize to soil conservation measures and fertilizer application.....	22
2.3.2 Runoff and soil loss as affected by soil conservation, fertilizer application and time.....	25
2.3.3 Evaluation of N losses by runoff, soil loss and leaching over time.....	28
2.3.4 Relationships between rainfall and both runoff and soil loss changes through time	30
2.2.5 Assessment of soil conservation measures for tropical mountainous regions.....	33
2.4 Discussion	33
2.4.1 Impact of fertilizer application on soil conservation measure performance over time	33
2.4.2 Temporal dynamics of runoff and soil loss after establishment of soil conservation measures	34
2.4.3 N balance and pathways of N losses.....	36

2.5	Conclusion	37
2.6	References.....	38
3	¹³C isotopic discrimination: a starting point for new insights in competition for nitrogen and water under contour hedgerow systems in tropical mountainous regions.....	42
3.1	Introduction.....	44
3.2	Materials and Methods.....	46
3.2.1	Study site	46
3.2.2	Experimental design	46
3.2.3	Spatial variability of crop response	47
3.2.4	Carbon isotope discrimination in maize	48
3.2.5	Effect of available Nitrate-N on crop response	49
3.2.6	Assessment of conservation measures through the use of crop response index	50
3.2.5	Statistical analysis.....	50
3.3	Results.....	50
3.3.1	Exploratory analysis of crop response.....	50
3.3.2	Spatial variability in maize grain yield.....	51
3.3.3	The influence of contour hedgerows on $\delta^{13}\text{C}$ values and N concentration in maize.....	54
3.3.4	Spatial distribution of available NO_3^- -N in the soil.....	56
3.3.5	Implications of spatial variability for the effectiveness of contour hedgerow systems.....	56
3.3.6	Correlation between $\delta^{13}\text{C}$ values and plant and soil parameters	59
3.3.7	Framework for ¹³ C analysis in contour hedgerow systems	61
3.4	Discussion.....	62
3.4.1	Nitrogen stress along the alleys of the contour hedgerow systems	63
3.4.2	Improved water uptake after fertilization	64
3.5	Conclusion	65
3.6	References.....	66
4	Assessing soil conservation strategies for upland cropping in Northeast Thailand with the Water Nutrient Light Capture in Agroforestry System model.....	69
4.1	Introduction.....	71
4.2	Materials and methods	73
4.2.1	Model description.....	73
4.2.2	Field data used for simulation	76
4.2.3	Model calibration and validation.....	78
4.2.4	Assessing the role of various soil conservation measures on controlling erosion by using WaNuLCAS	82
4.2.2	Model performance.....	82
4.3	Results.....	83

4.3.1	WaNuLCAS model calibration and validation	83
4.3.2	The effect of changing rainfall distribution on runoff and soil loss under soil conservation measures	88
4.3.3	The influence of soil structure dynamic on runoff and soil loss.....	89
4.3.4	Effect of Jack bean on runoff and soil loss.....	92
4.4	Discussion	95
4.2.1	Evaluation of WaNuLCAS model in predicting erosion	95
4.2.2	The role of soil conservation in controlling runoff and soil loss	97
4.2.3	Importance of soil structure dynamics and relay cropping with Jack bean in controlling runoff and soil loss	98
4.5	Conclusion.....	99
4.6	References	100
5	General discussion	105
5.1	Evaluation of the effectiveness of soil conservation measures and fertilizer application in controlling erosion.....	105
5.2	Assessment of crop response under soil conservation measures and fertilizer application	106
5.3	Evaluation of pathways of N losses and changes through time	108
5.4	Assessment of performance and efficiency for predicting erosion and dynamics of key processes influencing the efficiency of soil conservation measures by using WaNuLCAS.....	109
5.5	Potential acceptable options for smallholders.....	110
5.6	Recommendations	112
5.7	References	113
6	Summary	115
7	Zusammenfassung	119
