

Contents

1	Introduction	1
2	Super Heterodyne Receiver and Automotive Radar	5
2.1	Introduction	5
2.2	Super heterodyne receiver	5
2.3	Short range and long range automotive radar	6
3	SiGe Heterojunction Bipolar Technologies	9
3.1	Atmel's SiGe HBT technology	9
3.2	IHP's SiGe BiCMOS technology	10
4	Reactive Elements on Lossy Silicon Substrate	13
4.1	Introduction	13
4.2	Thin-film microstrip lines on lossy silicon substrate	13
4.2.1	Potential transmission line topologies for implementation on a low-resistivity Si substrate	13
4.2.2	Simulation of the TFMSLs	16
4.2.3	Modeling of the TFMSLs	19
4.3	Lumped elements on lossy silicon substrate	22
5	Millimeter Wave Amplifier ICs	23
5.1	Introduction	23
5.2	Millimeter-wave amplifiers based on lumped elements	23
5.2.1	Millimeter-wave Low Noise Amplifier topology	23

5.2.2	Isolation techniques	26
5.2.3	Layout and characterization	29
5.3	Millimeter-wave amplifiers using TFMSLs	32
5.3.1	Millimeter-wave amplifiers based on thin-film microstrip lines using Atmel's SiGe HBT Technology	32
5.3.2	77-81 GHz low noise amplifier based on thin-film microstrip lines using IHP's SiGe BiCMOS Technology	36
5.4	Summary of the millimeter-wave amplifiers performance	40
5.5	Comparison with previously published amplifiers	41
6	Millimeter Wave Voltage Controlled Oscillators	43
6.1	Introduction	43
6.2	Theory of oscillators	43
6.2.1	Negative resistance type oscillators	43
6.2.2	Oscillator phase noise	44
6.3	Description of the topology	45
6.4	Characterization of the VCOs with common-base buffer	51
6.5	VCO with cascode output buffer	56
6.6	Characterization of the VCOs with cascode buffer	59
6.7	Conclusion	62
6.8	Comparison with previously published oscillators	64
7	Fully Balanced Down-Converter Mixer	65
7.1	Introduction	65
7.2	Fundamentals of mixers	65
7.3	Double balanced mixer	66
7.4	Layout and measurements	69
7.5	Conclusion	73

8 High Performance Frequency Dividers	75
8.1 Introduction	75
8.2 Divider using second-order regenerative modulator	75
8.3 Divider using a fully differential Gilbert cell topology	78
8.3.1 Design philosophy	78
8.3.2 Layout of the dynamic frequency dividers with transimpedance stage	80
8.3.3 Characterization of the dynamic frequency dividers with transimpedance topology	81
8.4 Regenerative frequency divider design: Conclusion	86
8.5 Low power static frequency divider	87
8.5.1 Theoretical approach	87
8.5.2 Layout and characterization	87
8.6 32:1 frequency divider	89
8.6.1 Topology description	89
8.6.2 Measurements of the 32:1 frequency divider	89
8.7 Conclusion	91
9 Conclusion and Outlook	93
Bibliography	106
A Chip Photos of the Amplifiers	123
B Millimeter-Wave Amplifiers	125
C Chip Photos of the VCOs	133
D Millimeter-Wave VCOs	137
E Down-Converter Mixer	141
F Frequency Dividers	143
