## C. Corrosion and Degradation

- Prediction model for the degradation process of concrete due to the attack of sulphate-bearing water  
*M. Fenchel; H. Müller* 227
- Probabilistic concept for durability design of cement-based materials exposed to acid, ammonium, and sulphate solution  
*E. Rigo; F. Schmidt-Döhl; H. Budelmann* 243
- Prediction by numerical simulation of corrosion of hardened cement paste and concrete caused by acid  
*C. Gunstmann; L. Franke* 259
- Modelling the Evolution of Damage to Concrete by Acid Attack  
*R.E. Beddoe; H. Hilbig* 275
- The program systems Astra and Cesa for Cement and Salt Chemistry, Transportprocesses and Corrosion in Concrete and other porous Materials  
*R.M. Espinosa; J. Nicolai; C. Gunstmann; G. Deckelmann; H. Schmidt, L. Franke* 293
- Model for the mechanical stress due to the salt crystallization in porous materials  
*R.M. Espinosa; G. Deckelmann; L. Franke* 311
- Prediction of stress due to crystallization in a porous material and calculation of the damaging salt concentration  
*S. Kiencke; L. Franke* 327
- Extension and Application of the Simulation Programm Transreac to Investigate Debonding of Gypsum Plaster and Concrete  
*M. Heidmann; F. Schmidt-Döhl, E. Rigo* 351
- Multi phase and multi scale modelling of frost attack on Cementitious materials  
*J. Kruschwitz; M.J. Setzer* 367
- Numerical Simulation of the Frost Resistance of Masonry  
*A. Hinniger* 381
- Development of a Simulation Program for the Prediction of a possible ASR-Damage  
*T. Mansfeld* 395
-
