Acknowledgements	viii
List of Acronyms	VII
List of Symbols	IX
Introduction	XIII
1 Motivation and Objectives	1
1.1 Introduction	1
1.2 Virtual Surgery Simulation	1
1.3 Virtual Reality Based Training	3
1.4 Benefits and Risks	4
1.5 Key Components	6
1.5.1 Anatomical Models	6
1.5.2 Physical Modeling and Simulation	7
1.5.3 Collision Handling	9
2 Particle Methods	11
2.1 Introduction	11
2.2 Function Approximations	12
2.3 Derivative Approximations	14
2.3.1 General Deterministic Approximation	15
2.3.2 Moment Conditions	16
2.3.3 Discretized Formulation	17

2.4	Remeshing	17
2.5	Hybrid Particle-Mesh Methods	19
2.6	Initial and Boundary Conditions	20
3	Particle Level Set Method	23
3.1	Introduction	23
3.2	Level Set Method	25
3.3	Particle Representation of Level Sets	27
3.4	Lagrangian Particle Level Set	27
3.4.1	Reinitialization for Particle Level Sets	28
3.4.2	Fast Marching Method	29
3.4.3	Implementation	32
3.5	Results	33
3.5.1	Zalesak's Disk and Zalesak's Sphere	33
3.5.2	Single Vortex Flow	39
3.5.3	Deformation Test Case in Three Dimensions	48
3.5.4	Flow under Mean Curvature	52
3.6	Simulations of Processes in Microchip Fabrication	58
3.6.1	Isotropic Etching and Deposition	59
3.6.2	Directional Etching and Deposition	61
3.7	Virtual Cutting using Lagrangian Particle Level Sets	62
3.7.1	OpenInventor Toolkit for interactive 3D Graphics	62
3.7.2	Collision Detection for Deformable Objects	62
3.7.3	Liver Reconstruction and Collision Response	64
3.7.4	Results	65
4	Particle Simulation of Fluids	69
4.1	Introduction	69
4.2	Governing Equations	69
4.3	Definition of Non-dimensional Numbers Characterizing the Flow	70

4.4	Nondimensional Governing Equations	71
4.5	Particle Equations	72
4.6	Compressible Vortex Ring	73
4.7	Results	74
4.8	Note on the Error Analysis of Chaniotis <i>et al.</i>	78
4.9	Remeshed SPH versus Particle-Mesh Hydrodynamics	79
5	Particle Simulation of Elastic Solids	81
5.1	Introduction	81
5.2	Governing Equations	83
5.2.1	Linear Elastic Model	83
5.2.2	Nonlinear Elastic Model	84
5.2.3	Initial and Boundary Conditions	86
5.3	Particle Equations	86
5.3.1	Linear Elastic Model	87
5.3.2	Hyperelastic Model	87
5.3.3	Boundary Conditions	88
5.4	Accuracy	88
5.5	Plane Strain Compression Test	90
5.5.1	Linear Elastic Model	91
5.5.2	Hyperelastic Model	95
5.6	Simulation of an Aspiration Test on Liver Tissue	97
6	Parallel Particle Simulations	101
6.1	Introduction	101
6.2	Fundamentals	104
6.3	Topologies	105
6.4	Mapping	108
6.5	Particle-Particle Interactions	109
6.6	Particle-Mesh and Mesh-Particle Interpolations	111

6.7	Parallel Fast Multipole Method	113
6.8	Mesh-Based Solvers	114
6.9	ODE Solvers	115
6.10	Parallel I/O	116
6.11	Adaptive trees	116
6.12	Parallel Efficiency Benchmarks	118
6.12.1	The Fast Multipole Method	119
6.12.2	Parallel Multigrid Poisson solver	120
6.12.3	Parallel FFT-based Poisson solver	121
6.12.4	Three-Dimensional Remeshed Smooth Particle Hydrodynamics	124
7	Particle Immersed Boundary Method	127
7.1	Introduction	127
7.2	Particle Presentation of Immersed Boundaries	128
7.2.1	Particle Immersed Boundary Method (pIBM)	128
7.2.2	Particle Equations	130
7.3	Results	131
7.3.1	Poiseuille flow	131
7.3.2	Flow past a cylinder	132
7.3.3	Flow past a sphere	137
7.3.4	Falling Sphere	138
7.4	Simulation of Anguilliform Swimming	139
7.4.1	Introduction	139
7.4.2	Equations of the Anguilliform Swimmer	141
7.4.3	Computational Setup	141
7.4.4	Results	142
8	Fluid-Solid Interactions	153
8.1	Introduction	153
8.2	Particle Model of Cottet	154

8.3	SPH solution of Cottet Model	155
8.3.1	Particle discretization of governing equations	155
8.3.2	Boundary Conditions	157
8.3.3	Numerical Results	157
8.4	Model Extension for Compressible Fluid in 1D	160
8.4.1	Governing Equations	160
8.4.2	Particle discretization of governing equations	162
8.4.3	Results	164
8.5	Model Extension for a Compressible Fluid in 2D	164
8.5.1	Fluid Governing Equations	164
8.5.2	Solid Governing Equations	167
8.5.3	Interface Equilibrium Condition	167
8.5.4	Particle Equations	170
8.5.5	Results	171
8.5.6	Test Case for Shear Stresses	172
9	Conclusions	179
9.1	Introduction	179
9.2	Particle Level Set Method	179
9.3	Simulation of Elastic Solids	180
9.4	Particle Immersed Boundary Method	181
9.5	Fluid-Solid Interactions	182
9.6	Parallel Particle-Mesh Library	183
10	Outlook and Future Work	185
10.1	Particle Methods	185
10.2	Particle Simulation of Fluids	185
10.3	Particle Simulation of Elastic Solids	186
10.4	Particle Immersed Boundary Method	187
10.5	Fluid-Solid Interaction	187

10.6	Parallel Particle-Mesh Library	188
10.7	Lagrangian Particle Level Set Method	189
A	Cutting Using a Simplified Solid Model	191
A.1	Governing Equations and Particle Discretization	191
A.1.1	Integration Method	194
A.1.2	Visualization of the surface	194
A.2	Boundary Conditions	195
A.2.1	Ghost Particles	195
A.2.2	Fixed Boundary	196
A.2.3	Stress-free Boundary	196
A.3	Virtual Cutting Using Ghost Particles	198
A.3.1	Basic Idea	198
A.3.2	Cutting by Converting Particles	199
A.3.3	Cutting by Splitting Particles	200
A.4	Results	204
A.4.1	Cutting by Converting Particles	205
A.4.2	Cutting by Splitting Particles	205
A.5	Discussion	206
B	Higher Order Kernels	209
B.1	Kernels in 2D	210
B.2	Kernels in 3D	212
C	Moving Frameworks for Compressible Fluids	215
D	Bulk Viscosity	217
