## **Table of contents**

Summary	1
General Remarks	4
1 Postsynthetic DNA Modification via the Copper-Catalyzed Azide-Alkyne Cycloaddition	5
2 Click Chemistry as a Reliable Method for the High-Density Postsynthetic Functionalization of Alkyne-Modified DNA	20
3 DNA Photography: An Ultrasensitive DNA-Detection Method Based on Photographic Techniques	38
<b>4</b> Formation of Bimetallic Ag–Au Nanowires by Metallization of Artificial DNA Duplexes	58
<b>5</b> Synthesis of Highly Modified DNA Using a Combination of PCR with Alkyne-Bearing Triphosphates and Click Chemistry	70
6 Pronounced Effect of DNA Hybridization on Click Reaction Efficiency	106
7 Synthesis of Modified DNA by PCR with Alkyne Bearing Purines Followed by a Click Reaction	115
8 Click–Click: Single to Triple Modification of DNA	134
9 Sequential Click Chemistry on PCR Products	152
10 Sequential Click Chemistry for the Attachment of DNA onto Colloidal Mesoporous Silica (Cooperation with Prof. Bein)	163
11 Tetrathiafulvalene (TTF)-DNA Conjugates	173
12 Conjugation of Fluorescent Dyes to DNA for the Construction of DNA Nanotags (Cooperation with Prof. Armitage)	181
13 Synthesis and Structural Studies on DNA Containing a Tryptophan-Mimetic Nucleoside (Cooperation with Prof. Riedle)	193
List of Abbreviations	211
Materials and Methods	214
