

Contents

1. Introduction.....	1
2. Potential of phosphor coatings with decreased particle size.....	3
2.1. Phenomenon of luminescence: theory and related terminology	3
2.1.1. Efficiency of phosphors and luminescent devices	3
2.1.2. Photoluminescence performance of doped phosphors.....	6
2.1.3. Configurational coordinate diagram.....	8
2.1.4. Quantum mechanics.....	10
2.1.5. Judd-Ofelt theory	14
2.2. Basics of phosphor screens.....	16
2.2.1. Perfect non-scattering screens	16
2.2.2. Single scattering model	19
2.2.3. Models for multiple scattering of light in the powder screens.....	21
2.2.3a. Kubelka-Munk theory	23
2.2.3b. Johnson's theory (p-layer model).....	26
2.2.3c. Monte-Carlo method	27
2.2.4. Resolution of the phosphor screens	30
2.3. Luminescent screens with submicrometer phosphor particle size	39
2.3.1. Limits of performance of the luminescent screens.....	39
2.3.2. Benefits of the decreased phosphor particle size	40
2.3.3. Physical implications of reduction of the phosphor particle size	41
2.3.3a. Scattering and absorption of light by small particles	42
2.3.3b. Independent scattering and absorption in particulate media	45
2.3.3c. Dependent scattering and absorption in densely packed powders.....	46
2.3.3d. Influence of particle size on emission of luminescence...	50
2.3.3e. Non-optical effects of reduced particle size	54
3. Manufacturing of advanced phosphor screens	55
3.1. Challenges of deposition of phosphors with decreased particle size	55
3.2. Deposition of phosphor coatings by spray-based methods	57

4. Experimental methods	60
4.1. FAD setup.....	60
4.1.1. Droplet-to-particle conversion.....	60
4.1.2. Chemical vapor condensation	60
4.2. Choice of materials	62
4.2.1. Phosphors	62
4.2.1a. $\text{Y}_2\text{O}_3:\text{Eu}$	62
4.2.1b. $\text{Y}_3\text{Al}_5\text{O}_{12}:\text{Tb}$	63
4.2.2. Raw materials and commercial reference samples	65
4.3. Characterization methods.....	66
4.3.1. Morphology and phosphor particle size	66
4.3.2. Crystallinity of phosphor powders.....	66
4.3.3. Photoluminescence and attenuation.....	67
5. FAD based on droplet-to-particle conversion.....	69
5.1. Deposition of $\text{Y}_2\text{O}_3:\text{Eu}$ coatings from aqueous solutions without additives	69
5.1.1. General quality of the deposited screens.....	69
5.1.2. Influence of the process parameters on the deposition rate	71
5.1.3. Crystallinity of the $\text{Y}_2\text{O}_3:\text{Eu}$ phosphor	73
5.1.4. Control of the phosphor particle size	78
5.1.5. Optimum screen thickness	82
5.1.6. Optimum concentration of europium.....	83
5.1.7. Effect of decreasing phosphor particle size	86
5.1.8. Sensitization of photoluminescence of $\text{Y}_2\text{O}_3:\text{Eu}$ by co-doping with gadolinium.....	90
5.2. Influence of polymeric additives on morphology and performance of $\text{Y}_2\text{O}_3:\text{Eu}$ phosphor produced by DPC-FAD	94
5.2.1. Evolution of particle morphology and PL-output (for excitation at 254 nm)	94
5.2.2. Analysis of PL-performance throughout the UV-range	101
5.3. Deposition of yttrium aluminates doped with terbium	104
5.3.1. Morphology and size distribution of synthesized particles	104
5.3.2. Crystallinity of phosphor particles before and after thermal post-treatment.....	106
5.3.3. Flame annealing of amorphous FAD-deposits.....	108
5.4. Summary on DPC-FAD of phosphor coatings	113

6. FAD based on chemical vapor condensation	115
6.1. Choice of the process parameters	115
6.2. Effects of Eu-doping	119
6.3. Characterization of the deposited nanophosphor screens.....	125
6.4. Influence of light reflection from the substrate	129
6.5. Compaction of the nanophosphor coatings	130
6.6. Coating the surface of phosphor nanoparticles with a thin layer of silica.....	132
6.7. Summary on CVC-FAD of phosphor coatings	138
7. Sol-assisted FAD based on droplet-to-particle conversion.....	140
7.1. Non-pyrolytic sol-assisted FAD.....	141
7.2. Effect of adding ethanol to the standard nitrate precursor solution.....	144
7.3. Seed-assisted DPC-FAD	146
7.3.1. $\text{Y}_2\text{O}_3:\text{Eu}$ nanoparticles in Y_2O_3	147
7.3.2. $\text{Y}_2\text{O}_3:\text{Eu}$ nanoparticles in Gd_2O_3	149
7.3.3. $\text{Y}_2\text{O}_3:\text{Eu}$ nanoparticles in $\text{Y}_3\text{Al}_5\text{O}_{12}$	152
7.4. Summary on sol-assisted DPC-FAD	155
8. Conclusions and outlook.....	156
8.1. Conclusions.....	156
8.1.1. Pros and cons of FAD	156
8.1.2. Conclusions on DPC-FAD and new findings on FASP	157
8.1.3. On CVC-FAD	158
8.2. Outlook.....	159
References.....	161
List of publications.....	181
