Table of Contents

- 1 Introduction..... 1**
- 1.1 Centralised sanitation concepts..... 4**
 - 1.1.1 Historical background..... 4
 - 1.1.2 Drawbacks..... 5
- 1.2 Ecological sanitation..... 7**
 - 1.2.1 Introduction..... 7
 - 1.2.2 The need for ecological sanitation..... 7
- 1.3 Quantity, composition and hygienic properties of human faeces..... 9**
 - 1.3.1 Quantity..... 9
 - 1.3.2 Composition..... 10
 - 1.3.3 Pathogens in faeces..... 11
- 1.4 Global burden of water and excreta-related diseases..... 12**
- 1.5 Treatment processes and systems for faeces..... 12**
 - 1.5.1 Rottebehaelter or composting tank..... 12

- 2 Vermicomposting process..... 15**
- 2.1 The need and emergence of vermicomposting..... 15**
- 2.2 Vermicomposting mechanism and the role of worms..... 16**
- 2.3 Hygienic quality of the vermicompost..... 16**
- 2.4 Vermicomposting worms category..... 17**
- 2.5 Differences and similarities between composting and vermicomposting..... 17**
- 2.6 Evaluation of species for the breakdown of wastes..... 18**
 - 2.6.1 *Eisenia fetida*..... 18
 - 2.6.2 *Lumbricus rubellus* (Red worm)..... 21
 - 2.6.3 *Dendrobena veneta*..... 22
 - 2.6.4 *Perionyx excavatus* (Oriental compost earthworm)..... 23
 - 2.6.5 *Eudrilus eugeniae* (African night-crawler)..... 24
- 2.7 Suitable substrates for vermicomposting..... 26**
 - 2.7.1 Cattle solids..... 27
 - 2.7.2 Horse manure..... 27
 - 2.7.3 Pig solids..... 27
 - 2.7.4 Poultry wastes..... 28
 - 2.7.5 Potato waste..... 28

2.7.6 Paper pulp solids.....	28
2.7.7 Brewery waste and spent mushroom.....	28
2.7.8 Urban wastes.....	28
2.7.9 Wastewater sludge.....	28
2.8 Quality and nutrient content of vermicompost.....	30
2.9 Engineering of waste management by earthworms.....	31
2.9.1 Introduction.....	31
2.9.2 Windrows.....	32
2.9.2.1 Static pile windrows (batch).....	32
2.9.2.2 Top-fed windrows (continuous flow).....	33
2.9.3 Beds or bins.....	34
2.9.3.1 Top-fed beds (continuous flow).....	34
2.9.3.2 Stacked bins (batch or continuous).....	37
2.9.4 Flow-through reactors.....	37
2.9.5 Complete recycling system.....	38
2.9.6 Other engineering applications.....	38
2.9.6.1 Large scale vermicomposting of sewage sludge.....	38
2.9.6.2 Utilisation of reject heat from power stations for vermiculture...	38
2.9.6.3 Integrated system for pig effluent disposal and resource recovery.....	39
2.10 Possible uses of the vermicomposting products.....	39
2.10.1 Growth of plants in vermicomposts.....	39
2.10.2 The use of earthworms as a protein source.....	40
2.10.2.1 Introduction.....	40
2.10.2.2 Composition.....	41
2.10.2.3 Disease, heavy metals and biocides hazards.....	41
3 Material and methods.....	43
3.1 Laboratory scale experiments	43
3.1.1 Material origin and pre-processing	43
3.1.2 Experimental set up.....	43
3.2 Pilot scale vermicomposting experiments	44
3.2.2 Experimental set up.....	44
3.3 CaCO ₃ experiment.....	46

3.4 Chemical analysis.....	46
4 Results and discussions.....	48
4.1 Influence of duration of vermicomposting of faecal matter on compost parameters.....	48
4.1.1 Water content.....	48
4.1.2 pH.....	51
4.1.3 Volatile solids	53
4.1.4 Total organic carbon.....	57
4.1.5 Water soluble organic carbon.....	59
4.1.6 Water soluble inorganic carbon.....	61
4.1.7 Water soluble nitrate.....	64
4.1.8 Water soluble nitrite.....	66
4.1.9 Water soluble ammonium.....	69
4.1.10 Water soluble total nitrogen.....	71
4.1.11 Total Kjeldhal nitrogen.....	73
4.1.12 TC/TKN ratio.....	75
4.1.13 Respiration activity.....	78
4.1.14 Water soluble phosphorus.....	80
4.2 Dependence of compost maturity parameters on temperature and worm numbers.....	83
4.2.1 Temperature and worm number influence on water content.....	83
4.2.2 Temperature and worm number influence on pH.....	84
4.2.3 Temperature and worm number influence on nitrate.....	85
4.2.4 Temperature and worm number influence on ammonium.....	86
4.2.5 Temperature and worm number influence on water soluble nitrogen...	88
4.2.6 Temperature and worm number influence on total kjeldahl nitrogen...	88
4.2.7 Temperature and worm number influence on volatile solids.....	89
4.2.8 Temperature influence on respiration activity.....	90
4.2.9 Temperature and worm number influence on total organic carbon.....	91
4.2.10 Temperature influence on C/N ratio.....	92
4.2.11 Temperature and worm number influence on water soluble organic carbon	92

4.2.12 Temperature and worm number influence on water soluble inorganic carbon	93
4.2.13 Temperature and worm number influence on water soluble phosphorus.....	95
4.3 Up-scaling assessment of the experiments.....	96
4.3.1 Water content.....	96
4.3.2 pH.....	97
4.3.3 Volatile solids.....	97
4.3.4 Total organic carbon.....	98
4.3.5 Water soluble organic carbon.....	98
4.3.6 Water soluble inorganic carbon.....	99
4.3.7 Water soluble nitrate.....	99
4.3.8 Water soluble ammonium	100
4.3.9 Water soluble nitrogen.....	101
4.3.10 Total kjeldahl nitrogen.....	101
4.3.11 Water soluble phosphorus.....	102
4.3.12 Resumé comparing lab scale to pilot scale experiments.....	102
4.4 The effect of CaCO ₃ addition.....	103
4.4.1 Water content.....	103
4.4.2 pH.....	104
4.4.3 Volatile solids.....	104
4.4.4 Total organic carbon.....	105
4.4.5 Respiration activity.....	106
4.4.6 Water soluble organic carbon.....	106
4.4.7 Water soluble inorganic carbon.....	107
4.4.8 Ammonium nitrogen and water soluble organic nitrogen.....	107
4.4.9 Water soluble nitrate.....	109
4.4.10 Water soluble nitrite.....	109
4.4.11 Water soluble nitrogen.....	110
4.4.12 Total kjeldahl nitrogen (TKN) and solid organic nitrogen (SON).....	110
4.4.13 Water soluble phosphorus.....	111
4.4.14 Assessment of CaCO ₃ addition in vermicomposting process.....	112
4.5 The correlations between the different parameters.....	112

5 Design and financial evaluation.....	121
5.1 General information on Al Moufty AlKobra.....	121
5.1.1 Water supply.....	121
5.1.2 Current sanitation practices in Al Moufty AlKoubra.....	121
5.2 Proposed system.....	122
5.2.1 Technical details.....	122
5.3 Cost estimation and analysis.....	124
5.3.1 Investment costs.....	124
5.3.2 Operation and maintenance.....	124
6 Integration of the vermicomposting technology into the ecological sanitation	
Concepts	126
6.1 Black water cycle.....	126
6.2 Integration of the Rottebehaelter with flush, separating and vacuum toilets...	126
6.3 Continuous dry toilet system.....	127
6.4 Utilization of solar and wind energy.....	127
7 Conclusions.....	128
8 Recommendations for further research.....	130
8.1 Longer term experiment.....	130
8.2 Fluctuating temperatures.....	130
8.3 Reactor design and geometry effect.....	130
8.4 CaCO ₃ experiment.....	130
8.5 Sampling effect.....	131
8.6 Weight and volume reduction monitoring.....	131
8.7 Hygienic parameters, heavy metals and gas measurements.....	131
8.8 Asian and African tropical species.....	131
8.9 Investigation of the worm reproduction and growth rates.....	131
8.10 Control of air humidity.....	132
9 References.....	133
10 Annexes.....	147
