Abstract	ix
Zusammenfassung	xi
List of Symbols	xv
List of Abbreviations	xix
Part I Narrow-band imaging polarimetry	1
1. Introduction	3
2. The basics of Fabry-Pérot etalons	9
2.1 Multiple beam interference	9
2.2 Characteristics of the transmission spectrum	10
2.3 Transmission for different ray geometries	12
2.3.1 Parallel ray bundle	12
2.3.2 Converging ray bundle	12
2.4 Cavity thickness errors	13
2.5 Characteristics of our etalons and prefilters	14
3. Optical setups	19
3.1 Collimated versus telecentric	19
3.2 Field of view versus spectral performance	21
3.3 Optical setups chosen	23
4. Tuning and spectral calibration	29
4.1 Tuning parameters and etalon control	29
4.2 Voltage and temperature calibration	32
4.3 Fine tuning and flatfield scanning	34

4.4	Tuning through the prefilter	35
5.	Performance	41
5.1	Photometric sensitivity	41
5.1.1	Wavelength dependent elements	42
5.1.2	Wavelength-independent elements	44
5.1.3	Comparison with measured photon flux	46
5.2	Spectral and polarimetric performance	48
5.2.1	Performance parameters	48
5.2.2	Reflective parasitic light	49
5.2.3	Model of the tunable narrow-band filter	52
5.2.4	Results	56
5.3	Imaging performance	61
6.	Polarimetric calibration	67
6.1	Polarimeter	68
6.1.1	General procedure	68
6.1.2	Different modulator types	70
6.1.3	PEM calibration	73
6.2	Telescope	77
6.2.1	Model of the Swedish Solar Telescope	78
6.2.2	Measurements and model fitting	81
6.2.3	Results	85
7.	First observations	89
8.	Conclusions and outlook	93
	Bibliography	99
Part II	Polarized scattering at sodium vapor	103
9.	Introduction	105
10.	Solar evidence for a fundamental problem	107
10.1	The Na I D ₁ evidence	107
10.2	Comparison with related multiplets	110

11. Why the D_1 line is expected to be unpolarized	115
11.1 Dependence of polarizability on angular momentum	117
11.2 Hyperfine structure of D_2 and D_1	118
11.3 Exact cancellations in the D_1 system	120
11.4 Relation between W_2 and the polarized spectrum	121
11.5 Influence of collisions and magnetic fields	124
12. Laboratory experiment	127
12.1 Sodium cell	127
12.2 Experimental setup	129
12.2.1 Light source	129
12.2.2 Imaging optics	130
12.2.3 Fabry-Pérot etalon	130
12.2.4 Polarization optics and detector	131
12.3 Calibration of the light source	131
12.4 Absence of spurious signals	133
12.4.1 Reflections off the glass walls	134
12.4.2 Null polarization with horizontal entrance polarizer	134
12.4.3 Temporal instabilities	135
12.5 Results	135
12.5.1 Interpretation model	135
12.5.2 Upper limit for the D_1 polarization	137
12.5.3 Upper limit for the asymmetry of the D_2 phase matrix	139
13. Conclusions and outlook	141
Bibliography	143
Part III Polarimetry of the solar flash spectrum	147
14. Introduction	149
15. Instrument design	151
15.1 Photon budget	151
15.2 Telescope and spectropolarimeter unit	155
15.3 Instrument control and observing procedure	158
16. Conclusions and outlook	161

Bibliography 163

Acknowledgments 165

Curriculum Vitae 167
