CONTENT

1. GENERAL INTRODUCTION	12
1.1. Summary	12
1.2. Disease history	13
1.3. The vector of BNYVV: <i>Polymyxa betae</i> Keskin	13
1.3.1. Vector taxonomy	14
1.3.2. Life cycle of <i>Polymyxa betae</i> and host range	14
1.3.3. Molecular characterization of <i>Polymyxa</i> species	15
1.3.4. Vector detection and quantification	16
1.3.5. <i>P. betae</i> detection methods	16
1.3.6. Virus-vector relationships	17
1.4. BNYVV	18
1.4.1. Virus taxonomy	18
1.4.2. Genome organisation of BNYVV	19
1.4.3. BNYVV variability	22
1.5. Virus-host interaction	24
1.5.1. Factors influencing disease spread and severity	24
1.5.2. Genetic resistance against <i>Rhizomania</i>	26
1.5.3. Other soil-borne pathogens	28
1.6. <i>Rhizomania</i> -resistance tests in practice	29
2. AIMS OF THE STUDY	32
3. RESULTS AND DISCUSSION	33
3.1. Cultivation-time-dependent resistance tests	33
3.2. Overcoming of resistance depending on different BNYVV isolates	35
3.3. Influence of variable P25 composition on virus pathogenicity	36
3.4. Phylogenetic analyses of <i>Polymyxa betae</i>	36
3.5. Other soil-borne fungal pathogens	37
3.6. BNYVV and <i>Polymyxa betae</i> inoculum potential	37
3.6.1. Attempts for artificial infection with viruliferous <i>P. betae</i>	37
3.6.2. BNYVV and <i>P. betae</i> inoculum density in naturally infested soils	40
3.7. Genetic variability of BNYVV and its relation to virus spread	41
3.8. Infiltration of BNYVV-P25 + mRFP into sugar beet leaves	41
4. CONCLUSIONS AND FUTURE PROSPECTS	45
