

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Application Domain: Reputation Management . . . . .	3
1.2	Contributions of the Thesis . . . . .	6
1.3	Thesis Organization . . . . .	7
<b>2</b>	<b>Peer-to-Peer Networking</b>	<b>11</b>
2.1	Definitions and Requirements . . . . .	12
2.1.1	Structured and Unstructured Peer-to-Peer Networks . . . . .	13
2.1.2	Requirements . . . . .	16
2.1.3	Fluctuation . . . . .	17
2.2	Resource Location . . . . .	18
2.3	General Conceptual Model . . . . .	19
2.3.1	Choice of ID space . . . . .	21
2.3.2	Mapping to the ID Space . . . . .	21
2.3.3	Management of the ID Space . . . . .	22
2.3.4	Graph Embedding . . . . .	22
2.3.5	Routing Strategy . . . . .	24
2.3.6	Maintenance Strategy . . . . .	24
2.4	Second Generation Peer-to-Peer Networks . . . . .	25
2.4.1	Chord . . . . .	25
2.4.2	Kademlia . . . . .	31
2.4.3	Kelips . . . . .	35
2.4.4	OneHop . . . . .	39
2.4.5	Viceroy . . . . .	43
2.4.6	Pastry . . . . .	46
2.5	Data Availability and Replication . . . . .	51
2.6	Data Consistency Principles . . . . .	55
<b>3</b>	<b>Peer-to-Peer Data Stores</b>	<b>63</b>
3.1	Towards a Definition . . . . .	64

3.2	HyCub, a Peer-to-Peer Data Store Prototype . . . . .	68
3.2.1	Requirements . . . . .	70
3.2.2	HyCub System Design Aspects . . . . .	71
3.2.3	Overlay Network Topology . . . . .	74
3.2.4	Ensuring Data Availability . . . . .	77
3.2.5	HyCub’s Data Consistency Models . . . . .	80
3.2.6	Basic Operations . . . . .	86
3.2.7	Failure Detection . . . . .	103
3.2.8	Coordinator Election . . . . .	107
3.2.9	Epidemic-style Content Dissemination of Data Items .	113
3.2.10	Maintenance Strategy . . . . .	122
<b>4</b>	<b>Simulation of Peer-to-Peer Networks</b>	<b>137</b>
4.1	Introduction to Simulation . . . . .	139
4.2	Simulation Process . . . . .	141
4.3	Requirements and Assumptions . . . . .	144
4.4	Peer-to-Peer Simulation Environments . . . . .	145
4.4.1	The Network Simulator – NS-2 . . . . .	146
4.4.2	MACEDON . . . . .	146
4.4.3	OMNeT++ . . . . .	147
4.4.4	J-Sim . . . . .	147
4.4.5	PlanetSim . . . . .	148
4.4.6	PeerSim . . . . .	148
4.4.7	p-sim . . . . .	148
4.4.8	p2psim . . . . .	149
4.4.9	Dedicated Simulators . . . . .	150
4.4.10	Remarks . . . . .	151
4.5	The “HyCub” Simulator . . . . .	151
4.5.1	Course of a Simulation . . . . .	152
4.5.2	Sources of Randomness . . . . .	154
4.5.3	Visualization of Peer-to-Peer Data Store Dynamics . .	156
<b>5</b>	<b>Operation Analysis and Evaluation</b>	<b>167</b>
5.1	Methodology . . . . .	167
5.2	Asymptotic Analysis of the Lookup Algorithm . . . . .	168
5.3	Analysis of the Routing Protocol . . . . .	170
5.3.1	Mean Path Length . . . . .	171

5.3.2	Mean Number of Attempts . . . . .	172
5.3.3	Mean Communication Overhead . . . . .	173
5.3.4	Experimental validation . . . . .	174
5.4	Analysis of a Routing Protocol Modification . . . . .	178
5.4.1	Mean Communication Overhead (Modified Algorithm)	179
5.4.2	Experimental Validation of the Modified Algorithm . .	180
5.5	Analysis of the Coalesce Operation . . . . .	182
5.5.1	Prerequisites to a Fusion . . . . .	183
5.5.2	Obtaining a Safety Range . . . . .	184
5.5.3	Experimental Validation . . . . .	193
5.6	Analysis of the Split Operation . . . . .	197
5.6.1	Optimum for a Split . . . . .	197
5.6.2	Experimental Validation . . . . .	206
5.7	Comparison with Other Peer-to-Peer Networks . . . . .	211
5.7.1	Setup of the Simulators . . . . .	212
5.7.2	Comparison Results . . . . .	214
<b>6</b>	<b>Conclusion</b>	<b>219</b>
6.1	Open Problems . . . . .	223
