Abstract VII

1 Introduction 1
   1.1 Wireless System Model 2
   1.2 Contributions and Structure of this Thesis 3

2 Mobile Radio Channel 7
   2.1 Introduction 7
   2.2 Propagation 8
      2.2.1 Propagation Mechanisms 8
      2.2.2 Propagation Models 9
   2.3 Additive White Gaussian Noise 10
   2.4 Path Loss and Shadowing 11
   2.5 Multipath Propagation 13
      2.5.1 Narrow Band (Frequency Nonselective Channel) 16
      2.5.2 Broadband (Frequency Selective Channel) 18
      2.5.3 Stochastic Models (WSSUS) 20

3 OFDM Based System Concepts 27
   3.1 Fundamentals 27
      3.1.1 Continuous Time Model 29
      3.1.2 Discrete Time Model 34
   3.2 OFDM System Applications 36
      3.2.1 Wi-Fi 36
      3.2.2 WiMAX 38

4 Channel Estimation in OFDM based Systems 41
   4.1 Pilot Aided Channel Estimation 41
      4.1.1 Scattered Pilots 42
      4.1.2 Training Symbols 42
   4.2 Decision Directed Channel Estimation 45
4.2.1 Comparison between DDCE and PACE ............ 47
4.3 Differential Modulation, Incoherent Demodulation .... 47
  4.3.1 Differential Modulation in Time Direction for an OFDM System ........................................ 48
  4.3.2 Differential Modulation in Frequency Direction for an OFDM System ................................. 48
  4.3.3 Comparison between Coherent and Incoherent Demodulation Schemes ................................. 50

5 Link Adaptation and Diversity .......................... 53
  5.1 Link Adaptation in OFDM Systems .................. 53
    5.1.1 Selection of Best Subcarriers .................. 53
    5.1.2 PHY Mode Selection ........................... 54
    5.1.3 Dynamic Fragmentation .......................... 54
    5.1.4 Subcarrier Specific Adaptive Modulation ........ 55
    5.1.5 Joint Optimization DLC and PHY Layers ...... 55
    5.1.6 Water-Filling .................................. 55
  5.2 Diversities ....................................... 59
    5.2.1 Delay Diversity .................................. 59
    5.2.2 Frequency Diversity ............................. 59
    5.2.3 Spatial Diversity ................................ 60
    5.2.4 Time Diversity .................................. 62
    5.2.5 Multiuser Diversity ............................. 63
    5.2.6 Polarization Diversity ........................... 63

6 MIMO Systems .......................................... 65
  6.1 MIMO Channel Models ............................... 66
  6.2 MIMO Channel Capacity ............................. 68
  6.3 MIMO-OFDM Systems ................................ 72

7 Differential Space Time Block Codes .................. 75
  7.1 A New Class of DSTBC .............................. 78
  7.2 Influence of the PCM in this New Class of DSTBCs .... 94
    7.2.1 Analysis of a New PCM Scheme (PCM2) ........... 95
    7.2.2 Conclusion about the Influence of Different PCMs . 98
  7.3 System Performance in WSSUS Channels ................ 101
  7.4 Proposed Technique with Receive Diversity ........... 112
  7.5 Summary .......................................... 116
CONTENTS

8 Proposed Technique in a Coded System
  8.1 Convolutional Encoding .................................. 117
  8.2 Viterbi Decoder ......................................... 121
  8.3 Performance of the Technique in a Coded System ........ 123
  8.4 DSTBC, DSFBC and DSTFBC ............................. 126

9 Summary and Conclusions .................................... 129

A Doppler Profile ............................................... 133

B Channel Model Based on COST 207 Project .................. 137

C Viterbi Decoder Considerations ................................ 139

List of Figures ................................................ 148

List of Tables ................................................ 149

List of Abbreviations .......................................... 151

Bibliography .................................................. 154

Index .......................................................... 163
