

Contents

Introduction	1
1. Methods and Concepts	5
1.1. Mode-Locked Lasers	5
1.2. The Carrier-Envelope Phase	8
1.3. Measuring the Carrier-Envelope Phase Evolution	12
1.4. Stabilization of the Carrier-Envelope Phase	16
1.5. Supercontinuum Generation for $f-2f$ Interferometry	19
1.6. Origin of the Detected Carrier-Envelope Phase Jitter	21
2. Improvements of the Carrier-Envelope Phase Stabilization of Amplifier Systems	25
2.1. Quasi-common-path $f-2f$ Interferometer	26
2.1.1. Prism-based Quasi-Common-Path $f-2f$ Interferometer	28
2.1.2. Dichroic Quasi-Common-Path $f-2f$ Interferometer	31
2.1.3. Further Improvements	34
2.2. Fast $f-2f$ Interferometer for Amplifier Stabilization	35
2.3. Concluding Remarks	44
3. Direct Frequency Comb Synthesis with Arbitrary Offset	47
3.1. Concept for Direct Frequency Comb Synthesis	48
3.2. Experimental Verification	50
3.3. Further Improvements	58
3.4. Concluding Remarks and Outlook	63
4. Sub-Shot-Noise Carrier-Envelope Frequency Jitter in Kerr-Lens Mode-Locked Lasers	65
4.1. Observation of Sub-Shot-Noise Carrier-Envelope Frequency Jitter . .	66

Contents

4.2. Origin of Sub-Shot-Noise Carrier-Envelope Frequency Jitter in Feed-back Configuration	78
4.2.1. Feedback Based Generation of Sub-Shot-Noise Characteristics	78
4.2.2. Interpretation in Terms of Soliton Induced Photon-Number Squeezing	80
4.2.3. Interpretation in Terms of Quantum Non-Demolition Measurements	81
4.3. Concluding Remarks	89
5. Conclusions	93
A. Phase Noise Characterization	95
A.1. Frequency Analysis of the Carrier-Envelope Phase Noise	95
A.2. Phase Noise Measurements with a Radio-Frequency Spectrum Analyzer	97
Bibliography	99
