Summary	11
Summary in German (Zusammenfassung)	13
Summary in Chinese	15
Summary in Uyghur	17
1 Introduction	19
2 State of the art	23
2.1 Introduction into the term “Tugai vegetation”	23
2.2 Distribution of Tugai vegetation and Tugai forests	24
2.3 The Tugai plant communities along the Tarim’s middle reaches and the biological features of their main species	26
2.3.1 The biological features of <i>Populus euphratica</i>	29
2.3.2 The biological features of other species	32
2.4 Utilization and conservation of the Tugai vegetation	34
3 Research goals	40
4 Study area	42
4.1 Location of the study area	42
4.2 Geology and geomorphology	45
4.3 Climate	46
4.4 Hydrology	47
4.5 Soils	51
4.6 Population and land use	52
4.7 Human impact on the Tarim River system in the study area	54
4.8 The Tarim Huyanglin Nature Reserve	55
5 Methods	60
5.1 Overview over the used methods	60
5.2 Vegetation recording and soil sampling	61
5.2.1 Location of vegetation samples and soil profiles	61
5.2.2 Vegetation recording and defining plant communities	62
5.2.3 Soil profiles and soil sampling	63
5.2.4 Transects	64

5.2.5	Analysis of vegetation and soil data	65
5.3	Land cover mapping based on Landsat ETM+ classification	66
5.3.1	Description of images and image pre-processing	67
5.3.2	Classification of the Landsat ETM+ images	68
5.3.3	Digitizing water areas for the land cover map	71
5.4	Detection of land cover changes by comparing Landsat MSS, TM, and ETM+ images	71
5.5	Examination of current land use practices and their impacts on the Tugai vegetation	73
6	Results	76
6.1	Vegetation and site investigation	76
6.1.1	Soils and site parameters	76
6.1.2	The plant communities resulting from the vegetation classification	79
6.1.3	Species and plant communities versus site parameters	84
6.1.4	Transects	92
6.1.4.1	Transect Ia – river dynamics and site formation	92
6.1.4.2	Transects Ib, Ic, and Id representing the current inland delta and its margins	96
6.1.4.3	Transect II from the Tarim River across the former inland delta	99
6.2	Land cover map of the study area derived from satellite image classification	102
6.2.1	Land cover map of the study area and spatial distribution of map units	103
6.2.2	Validation of the satellite image classification results	106
6.3	Vegetation changes in the study area	108
6.4	Results of the investigation into current land use practices	111
6.4.1	Livestock herding	111
6.4.1.1	The grazing system	111
6.4.1.2	Livestock	113
6.4.1.3	Products and income from livestock herding	114
6.4.1.4	The relation between land cover map units and pasture types	116
6.4.1.5	Potential livestock sizes at the model site of Iminqäk	117
6.4.1.6	Potential livestock sizes for the whole Tarim Huyanglin Nature	118

	Reserve	
6.4.2	Growing cotton	120
6.5	Status of nature conservation in the Tarim Huyanglin Nature Reserve	120
7	Discussion	122
7.1	Analysis of soils, vegetation, and transects	122
7.1.1	Soil and site parameters	122
7.1.2	Plant communities	123
7.1.3	Site conditions required by species and plant communities	124
7.1.4	The river course dynamics and its implications for the formation of Tugai forests	127
7.1.5	Tugai vegetation succession	130
7.1.6	Is there any Tugai vegetation beyond Central Asia?	132
7.2	The land cover map of the vegetation distribution throughout the study area	133
7.3	Vegetation changes throughout the study area	135
7.4	Impact of the land use on the Tugai vegetation	136
7.5	The implications for the conservation of Tugai forests and Tugai vegetation	138
8	Literature	149
Appendix I	List of Tables	165
Appendix II	List of Figures	168
Appendix III	List of geographical names	173
Appendix IV	List of abbreviations	174
