Table of Contents

Table of figures	iv
List of tables.....	v
ABBREVIATIONS	vi
1.0 INTRODUCTION.....	1
1.1 The human and simian immunodeficiency viruses.....	1
1.1.1 Origin and similarities, infection and pathogenesis.....	1
1.1.2 Gene structure and functions.....	2
1.1.3 Receptor-virus interactions	7
1.1.4 Replication, transcription and regulation of gene expression	9
1.1.5 Cytokines in immune response and regulation	10
1.1.6 Effects of chemokines on HIV/SIV infection.....	11
1.2 Pre-clinical models of HIV-1 vaccine studies.....	13
1.2.1 DNA Vaccines	14
1.2.2 Viral vector vaccines.....	15
1.3 Rationale for the study	16
1.4 Study Objectives	17
2.0 MATERIALS AND METHODS.....	19
2.1 General Methods.....	19
2.1.1 Immunogens.....	19
2.1.2 Experimental animals and design	21
2.1.3 Follow-up before and after challenge.....	22
2.1.4 Preparation of Peripheral Blood Mononuclear Cells	23
2.1.5 Preparation of virus stock for <i>in vitro</i> infections.....	23
2.1.6 Virus titration	23
2.1.7 Indirect Immunoperoxidase Assay.....	24
2.2 <i>Ex vivo</i> susceptibility assays	24
2.2.1 Infection of peripheral blood mononuclear cells.....	24
2.2.2 Preparation of DNA Plasmids for PCR standards	25
2.2.3 <i>In vitro</i> transcription and preparation of RNA standards for PCR.....	26
2.2.4 Isolation of viral RNA for quantitative PCR	28
2.2.5 Quantitative Real-time Reverse Transcriptase PCR	29
2.3 SIVgag-specific IFN γ ELISPOT assays	30
2.4 CD-8+ T-cell non-cytotoxic antiviral response (CNAR) assay	31
2.5 Flow cytometry analyses	32
2.6 Macaque MHC-class 1 typing techniques	32
2.6.1 DNA preparation for MHC typing	32

2.6.2	MHC class I locus-specific PCR typing	33
2.7	Cytokine assays	34
2.7.2	Preparation of Standards for the assay	34
2.7.3	Cytokine bead array: principles of the assay	35
2.7.4	Cytokine bead array: assay procedures	35
2.8	Statistical analyses and determination of associations.....	37
3.0	RESULTS	38
3.1.1	Immunization significantly attenuates <i>ex vivo</i> susceptibility to SIV	38
3.2	Immune Correlates of <i>ex vivo</i> SIV suppression	43
3.2.1	Suppression of SIV <i>ex vivo</i> correlates with INF γ -ELISPOT and CNAR	43
3.3	Progression to SIV infection after challenge.....	48
3.3.1	Immunisation leads to significant control of acute viremia after challenge	49
3.3.2	Immunization preserves memory CD4+ T-cells after challenge	53
3.4	Influence of MHC class-1 allele on susceptibility to SIV	54
3.4.1	PCR typing and MHC- class 1 <i>Mamu</i> allele frequencies.....	56
3.4.2	MHC- class 1 allele did not affect <i>ex vivo</i> susceptibility to SIV infection..	57
3.4.3	Influence of MHC class 1 on control of viremia after challenge.....	59
3.4.4	Expression of high frequency MHC-1 alleles is linked to rapid SIV replication and viremia turnover	61
3.5	Effect of chemokines and cytokines on <i>ex vivo</i> susceptibility to SIV	62
3.5.1	Secretion of β -chemokines and cytokines is suppressed in <i>ex vivo</i> infected cells of immunised macaques	63
3.5.2	Gama inducible protein 10 (IP10, or CXCL10) is lowered during effective viral control and increased during rapid virus replication	65
3.5.3	Association of chemokines and cytokines with SIV replication <i>ex vivo</i>	67
3.6.1	Pre-challenge VVR accurately predicts plasma viremia after challenge ...	70
3.6.2	Intrinsic susceptibility <i>ex vivo</i> predicts the number of memory CD4+ T-cells after challenge.	71
3.6.3	Pre-challenge CNAR but not IFN γ ELISPOT correlate with plasma viremia and memory CD4+ T-cells counts	73
3.6.4	Pre-challenge secreted cytokine levels correlate with post-challenge plasma viremia and memory CD4+ T-cell counts	75
4.0	DISCUSSIONS	78
4.1	<i>Ex vivo</i> susceptibility to SIV infection.....	78
4.2	Control of viremia after challenge.	79
4.3	Influence of MHC-class 1 alleles on <i>ex vivo</i> and <i>in vivo</i> virus replication.	82
4.4	Influence of cytokines and chemokines on <i>ex vivo</i> SIV infection.	85
4.4.1	Kinetics of cytokines and chemokines in <i>ex vivo</i> infected PBMC cultures....	85

4.4.2	Association of β -chemokines and cytokines with ex vivo SIV replication.....	86
4.4.3	CXCL10 is associated with increased susceptibility to SIV.	88
4.5	<i>Ex vivo</i> model as a predictive surrogate for post-challenge outcome.....	89
4.5.1	Intrinsic susceptibility predicts viremia and CD4+ T-cell memory after challenge.	90
4.5.2	Pre-challenge CNAR but not IFN γ ELISPOT predicts post-challenge plasma viremia and memory CD4+ T-cells.....	90
4.5.3	Beta chemokines correlate differentially with efficacy of vaccine-induced protection.....	92
4.5.4	Pre-challenge levels of CXCL10 correlate with post-challenge plasma viremia and memory CD4+ T-cells.	92
5.	CONCLUSIONS.....	94
6.0	SUMMARY.....	95
6.0	ZUSAMMENFASSUNG	97
7.0	REFERENCES.....	99
	APPENDIX.....	120
App. 1.1	REAGENTS AND MATERIALS USED FOR VARIOUS ASSAYS.....	120
