

# CONTENTS

<b>1. Introduction .....</b>	<b>1</b>
<b>2. Brief Review of Transmission Fluctuation Spectrometry .....</b>	<b>4</b>
2.1 Introduction to Transmission Fluctuations .....	4
2.2 Basic Considerations .....	6
2.3 ETS with Temporal Averaging .....	8
2.4 ETS with Spatial Averaging .....	10
2.5 ETS with a Combined Spatial and Temporal Averaging in the Time Domain .....	12
2.6 ETS with a Combined Spatial and Temporal Averaging in the Frequency Domain .....	15
2.7 Discussion and Conclusions .....	18
<b>3. Theory on Transmission Fluctuation Correlation Spectrometry .....</b>	<b>21</b>
3.1 Introduction .....	21
3.2 Direct Correlation Function of Two-dimensional Hard Sphere Fluids .....	22
3.2.1 Background of Two-dimensional Fluid Model .....	22
3.2.2 The Direct Correlation Function .....	23
3.2.3 Our Proposal for Direct Correlation Function .....	25
3.2.4 Radial Distribution Function .....	29
3.2.5 Structure Factor .....	32
3.2.6 Discussion .....	34
3.2.7 Conclusions .....	36
3.3 Transmission Fluctuation Correlation Spectrometry .....	36
3.3.1 Transmission Fluctuations of Radiation Through a Monolayer .....	36
3.3.2 Spatial Correlation Technique Using Dual Parallel Beams .....	39
3.3.3 Autocorrelation Technique Using a Single Beam .....	41
3.3.4 Equivalence between TFS-AC in the Time Domain and TFS-SC in the Spatial Domain for an Angle $\varphi \rightarrow 0$ .....	42
3.3.5 Mathematical Formulation for Expectancy of the Transmission Product .....	43

---

3.3.6	Discussion on the Potential Spatial Averaging in the ETP.....	49
3.3.7	Comparison of the Transition Function of the ETP and the ones of the ETS in the Previous State of TFS .....	52
3.4	Extension of Transmission Fluctuation Correlation Spectrometry to the Case of Crossed Beams.....	55
3.4.1	Determination of the Correlation Distance of Bibeam in TFS-SC .....	55
3.4.2	Numerical Results .....	57
3.4.3	Analysis of the Spatial Resolution in the Measurement with Crossed Beams.....	60
3.4.4	Discussion .....	64
3.5	Extension of Transmission Fluctuation Correlation Spectrometry to the Case of Partially Transparent Particles with Penetrating Radiation .....	69
3.5.1	Mathematical Model .....	70
3.5.2	ETP of the Monodisperse Monolayer with Penetrating Radiation .....	72
3.5.3	Discussion .....	77
3.6	Conclusions and Applications.....	79
<b>4</b>	<b>Numerical Simulations on Transmission Fluctuation Correlation Spectrometry ....</b>	<b>80</b>
4.1	Introduction.....	80
4.2	Outline of the Numerical Simulations .....	81
4.3	Simulations on Extinction.....	83
4.4	Simulations on Two-dimensional Monolayers .....	86
4.5	Simulations on Three-dimensional Suspensions .....	88
4.6	Discussion and Conclusions .....	94
<b>5</b>	<b>Experimental Techniques.....</b>	<b>96</b>
5.1	Testing Materials .....	96
5.2	Preparation of Monodisperse Particles .....	97
5.3	TFCS Experimental Setup .....	99
5.3.1	Optical Arrangement Design .....	99
5.3.2	Estimation of the Beam Waist .....	101
5.3.3	Flow System.....	102

---

5.3.4	Measurement Sensitivity .....	103
5.4	Experimental System to Measure Vortical Flow Structures .....	105
5.4.1	LDV Technique .....	106
5.4.2	Experimental System.....	107
<b>6</b>	<b>Particle Size, Concentration and Transmission Fluctuations of a Narrow Beam through Flowing Suspensions .....</b>	<b>110</b>
6.1	Extinction of Flowing Suspensions by a Narrow Beam.....	110
6.2	Corrections to Beer's Law in Concentrated Suspensions.....	112
6.2.1	Riebel's Steric Particle-particle Interaction Model .....	112
6.2.2	Vereshchagin's Approximation.....	113
6.2.3	Polynomial Fit of Particle Concentration .....	114
6.3	Experimental Results.....	115
6.3.1	Measurements on Spherical Particles .....	116
6.3.2	Measurements on Non-spherical Particles .....	118
6.4	Discussion.....	121
6.5	Conclusions .....	124
<b>7</b>	<b>Inversion Algorithms Applied to Transmission Fluctuation Correlation Spectrometry .....</b>	<b>125</b>
7.1	Introduction .....	125
7.2	Formulation of the Inversion Problem in the TFCS Measurement .....	125
7.3	Inversion Algorithms .....	128
7.3.1	Modified Chahine Inversion.....	128
7.3.2	Relaxation Method .....	129
7.4	Numerical Tests and Discussion .....	132
7.4.1	Convergence of the Inversion Algorithms.....	132
7.4.2	Evaluation of the Stability .....	136
7.4.3	Test of Experimental Data.....	140
7.5	Conclusions .....	145
<b>8</b>	<b>Measurements on Flowing Particle Suspensions .....</b>	<b>147</b>
8.1	Experimental Results on Particle Size Distributions.....	147

---

8.1.1	Monomodal Suspensions .....	148
8.1.2	Bimodal Suspensions .....	155
8.2	Measurements on Partially Transparent Particles.....	161
8.3	Experimental Results on Particle Volume Concentration.....	167
8.4	Investigation of the Effect of Monolayer Density on the Spatial Structure of the Suspensions Using a Narrow Beam .....	171
8.4.1	2D Monolayer of Monodisperse Hard Spheres .....	171
8.4.2	3D Suspension of Monodisperse Hard Spheres.....	174
8.5	Experimental Results Measured by TFS-SC .....	176
8.6	Discussion and Conclusions .....	178
<b>9</b>	<b>Investigations on Vortical Flow Structures behind Bluff Bodies .....</b>	<b>180</b>
9.1	Turbulent Wake Flow behind Bluff Bodies.....	180
9.2	Nature of Velocity Fluctuations in the Downstream Wake of Vortex Streets.....	181
9.2.1	Vortex Shedding Frequency .....	181
9.2.2	Analysis of Turbulence Signals .....	183
9.3	Investigation Methods.....	185
9.3.1	Numerical Modeling .....	185
9.3.2	Flow Visualization .....	187
9.3.3	Non-contact Optical Techniques.....	189
9.4	Vortex Shedding Frequency Measured by the LDV Technique.....	190
9.4.1	Measurements in the Case of the Free Inlet Flow.....	190
9.4.2	Measurements in the Case of the Pulsating Flow .....	193
9.5	Vortical Flow Structures Measured by the TFCS Technique.....	195
9.5.1	Measurements in the Downstream Wake of Vortex Streets .....	195
9.5.2	Measurements on the Pulsating Flow Structures in the Wake.....	200
9.6	TFCS Measurements Based on Numerical Simulations of Vortical Flow Structures .....	202
9.7	Discussion and Conclusions .....	205
<b>10</b>	<b>Conclusions and Outlook .....</b>	<b>207</b>

---

10.1 .General Conclusions.....	207
10.2 .Outlook.....	209
<b>11 References .....</b>	<b>210</b>
<b>12 Appendix .....</b>	<b>217</b>
12.1 Solution of $\langle Z_1 \rangle$ and $\langle Z_2 \rangle$ in the ETP.....	217
12.2 ETP for a Monodisperse Monolayer with Two Infinitesimally Thin Beams .....	220
12.3 Relation between the Beam Distance and the Control Voltage of the Piezo Controller .....	227
<b>13 Nomenclature .....</b>	<b>229</b>
<b>14 Publications .....</b>	<b>233</b>
<b>Acknowledgements .....</b>	<b>235</b>
<b>Resume.....</b>	<b>236</b>
