I Content

1 Introduction **1**
1.1 State of the art – Developing high performance optical systems 2
1.2 Goal and outline 7

2 Fundamentals of tolerances in optical systems **9**
2.1 Manufacturing tolerances of optical components 9
2.1.1 Description of regular manufacturing errors 9
2.1.2 The probabilistic nature of tolerances 12
2.1.3 Cost of tolerances 13
2.2 Effects of errors on system performance 15
2.2.1 Optical performance measures 15
2.2.2 Aberrations in centered optical systems 17
2.2.3 Aberrations in non-centered optical systems 19
2.2.4 Zernike polynomials 20
2.3 Tolerancing of optical systems 21
2.3.1 Tolerance analysis 21
2.3.2 Tolerance budget and cost optimal tolerancing 24
2.3.3 Compensating effects of errors 26
2.3.4 Tolerance desensitization 27
2.4 Summary and conclusion 28

3 Combinatorial assembly of optical systems **29**
3.1 Combinatorial assembly - a compensation strategy 29
3.1.1 Principles of combinatorial assembly 29
3.1.2 The fundamental matching problem 33
3.1.3 Variants of the matching 36
3.2 Optimization of component matching 37
3.2.1 Rigorous calculation 38
3.2.2 Linear optimization 41
3.2.3 Approximate optimization methods 44
3.3 Application to optical systems 46
3.3.1 Combinatorial compensation of basic system properties 47
3.3.2 Compensation of imaging performance criteria 49
3.3.3 Mechanical realization of modules 52
3.3.4 Cost-efficient application of combinatorial assembly 54
3.4 Summary and conclusion 57

4 Tolerance analysis and assignment 58
4.1 Tolerance analysis concept 58
4.1.1 Statistical quality prediction 59
4.1.2 Tolerance analysis with secondary tolerances 61
4.2 Computer-based tolerance simulation 62
4.3 Tolerancing combinatorial assembly 65
4.3.1 The tolerance region 66
4.3.2 Matching tolerances 67
4.3.3 Scaling with production volume 72
4.3.4 Cost-optimized tolerances 74
4.4 Summary and conclusion 78

5 Design for combinatorial assembly 79
5.1 The effect of combinatorial assembly on desensitization 80
5.2 Design for insensitivity and combinatorial assembly 83
5.2.1 Changing sensitivities to match tolerance regions 84
5.2.2 Desensitization of secondary tolerances 89
5.3 Global optimization strategies 92
5.4 Summary and conclusion 94

6 Examples of combinatorial assembly 95
6.1 Planar assembly of solid state lasers 95
6.1.1 Centering errors of MicroSlab's pump optics 96
6.1.2 Symmetry aspects of MicroRod 99
6.2 Laser focusing lens 100
6.2.1 Compensating aberration equilibria 101
6.2.2 Compensating on-axis coma 103

7 Conclusion and Outlook 105

II Bibliography 109
III Figures 116
IV Abbreviations 119

V Appendix 123
1.1 Calculation of vector aberrations 123
1.2 Tolerance laws for uniform distribution 126
1.3 Lens data of the global optimization 128
1.4 Details on the MicroSlab example 130
1.5 Details on the laser focusing lens example 132
