

Table of contents

CHAPTER 1. General introduction	1
1.1. Introduction: Background & aim of thesis	2
1.2. References	7
CHAPTER 2. Biological monitoring of pollution in forests and of pollution caused by the wood and paper industry and by wood utilization	11
2.1. Abstract	12
2.2. Introduction	13
2.3. Bioindicators	15
2.3.1. Bioindicators in forestry	19
2.3.2. Bioindicators in applications of wood industry	22
2.4. Bioreporters and biosensors	23
2.4.1. Natural bioreporters	24
2.4.2. Genetically engineered bioreporters	25
2.4.3. Biosensors	28
2.5. Conclusions	30
2.6. References	31
CHAPTER 3. Yeast toxicity assays with volatile compounds in solid and liquid media	49
3.1. Abstract	50
3.2. Introduction	51
3.2.1. Sampling of volatile organic compounds	53
3.2.1.1. Headspace analysis	53
3.2.1.2. Environmental test chambers	54
3.2.1.3. Emission test cell	54
3.2.1.4. CLIMPAQ	54
3.2.1.5. General comparison of chambers	55
3.2.2. Identification and quantification of VOCs	55
3.2.3. Biological assessment	55

3.2.4. Alternative toxicity tests	58
3.2.5. Genetically modified bioreporters	59
3.3. Materials & Methods	61
3.3.1. Yeast strains, media and culture conditions	61
3.3.2. Toxicity tests	61
3.3.2.1. Plate sensitivity tests with <i>S. cerevisiae</i> W303-1A and RH1385 strains to select the most sensitive strain as host strain	62
3.3.2.2. Liquid sensitivity tests with <i>S. cerevisiae</i> W303-1A with various organic compounds	62
3.4. Results & Discussion	63
3.4.1. Selection of host strain for bioreporter construction	63
3.4.2. Testing sensitivity of <i>Saccharomyces cerevisiae</i> W303-1A towards different types of toxic chemicals in liquid medium	64
3.5. Conclusions	72
3.6. References	72
3.8. Supplementary data	80
CHAPTER 4. Microarray analysis of stress responses of <i>Saccharomyces cerevisiae</i> to volatile organic compounds released from wood and wood-related sources	93
4.1. Abstract	94
4.2. Introduction	95
4.3. Materials & Methods	98
4.3.1. Yeast strain	98
4.3.2. Exposure of yeast cells to VOCs for microarray experiments	98
4.3.3. Isolation of total RNA and mRNA, cDNA synthesis and labeling, and microarray hybridization	99
4.3.4. Data analysis	100
4.3.5. Validation of microarray data by RT-PCR	100
4.4. Results & Discussion	102
4.4.1. Treatments of yeast cells with VOCs	102

4.4.2. Overview of genes affected by the VOCs treatment	104
4.4.3. Formaldehyde treatment	107
4.4.4. α -pinene Treatment	111
4.4.5. Fresh pine wood treatment	113
4.4.6. Evaluation of quality of data by RT-PCR	114
4.5. Conclusions	115
4.6. References	119
4.6. Supplementary data	127
CHAPTER 5. Construction of yeast bioreporters by fusion of suitable promoters to the <i>Escherichia coli lacZ</i> gene	139
5.1. Abstract	140
5.2. Introduction	141
5.3. Materials & Methods	143
5.3.1. Yeast strains, media and culture conditions	143
5.3.2. Plasmids, <i>Escherichia coli</i> strains, media and culture conditions	143
5.3.3. Construction of reporter vectors	144
5.3.4. β -galactosidase assay with <i>Saccharomyces cerevisiae</i> W303-1A transformants grown in liquid cultures on exposure to toxic VOCs	146
5.3.5. Agar plate β -galactosidase assay with <i>Saccharomyces cerevisiae</i> W303-1A transformants on exposure to toxic VOCs	147
5.4. Results & Discussion	148
5.4.1. Construction of yeast reporter vectors	148
5.4.2. β -galactosidase assays with <i>Saccharomyces cerevisiae</i> transformants during growth in liquid cultures	149
5.4.3. β -galactosidase agar plate assays with <i>Saccharomyces cerevisiae</i> transformants	152
5.4.3.1. Promoters from genes of heat shock proteins	153
5.4.3.2. The <i>CIN5</i> promoter	155
5.4.3.3. Promoters from genes of cell wall and cell membrane associated protein promoters	156
5.4.3.4. <i>GRE2</i> promoter	156
5.4.3.5. <i>GAC1</i> promoter	157

5.4.3.6. <i>GTT1</i> promoter	157
5.5. Conclusions	160
5.6. References	165
5.7. Addendum	172
CHAPTER 6. Selection of a host strain for the construction of yeast bioreporter	177
6.1. Abstract	178
6.2. Introduction	179
6.2.1. ABC transporters	180
6.2.2. Major facilitator superfamily	181
6.2.3. Drug detoxification pathways in yeast	182
6.3. Materials & Methods	183
6.3.1. Strains, media and growth conditions	183
6.3.2. Disruption of <i>GTT1</i> and <i>ERG6</i> genes of <i>Saccharomyces cerevisiae</i> by LFH PCR	184
6.4. Results & Discussion	186
6.4.1. Agar plate toxicity assay	186
6.4.2. Toxicity assays with <i>GTT1</i> and <i>ERG6</i> deletion mutants of W303-1A	189
6.4.3. Comparison of the sensitivity of W303-1A and its <i>GTT1</i> and <i>ERG6</i> knock-out strains with formaldehyde treatment	189
6.5. Conclusions	190
6.6. References	192
CHAPTER 7. Transformation of the <i>cfs1</i> gene from <i>Coprinopsis cinerea</i> as a candidate gene for stress resistance into an <i>erg6</i> mutant of <i>Saccharomyces cerevisiae</i>: reactions on chemical treatments	199
7.1. Abstract	200
7.2. Introduction	201
7.3. Materials & Methods	202
7.3.1. Yeast strains, media and growth conditions	202
7.3.2. <i>Escherichia coli</i> strain	203

7.3.3. Construction of Plasmid pRS316- <i>cfs1</i>	203
7.3.4. Drug sensitivity tests	204
7.3.4.1. Yeast transformation	204
7.3.4.2. Drug susceptibility tests in <i>ERG6</i> and <i>GTT1</i> knock-out strains	204
7.3.4.3. Complementation tests in <i>ERG6</i> knock-out of <i>Saccharomyces cerevisiae</i> with <i>cfs1</i> from <i>Coprinopsis cinerea</i>	204
7.3.5. Phylogenetic profiling	205
7.3.5.1. Sequence retrieval and alignment	205
7.4. Results	204
7.4.1. <i>S. cerevisiae</i> Δ <i>ERG6</i> has altered drug susceptibility Profiles	206
7.4.2. Drug susceptibility studies of transformed strain BY4741 Δ <i>ERG6</i> after transformation with the <i>cfs1</i> gene from <i>Coprinopsis cinerea</i>	207
7.4.3. Role of <i>Coprinopsis cinerea cfs1</i> gene in <i>Saccharomyces cerevisiae</i> <i>ERG6</i> knock-out under various stress conditions	211
7.4.4. Comparison of the <i>ERG6</i> protein from <i>Saccharomyces cerevisiae</i> and related SAM-dependent methyltransferases from basidiomycetes	215
7.5. General Discussion	226
7.5.1. Discussing the role of the <i>ERG6</i> protein in fungi further with more data from the literature	226
7.5.2. Comparing SAM-dependent methyltransferases in plants and fungi	228
7.5.3. Further discussion of SAM-dependent methyltransferases from basidiomycetes	229
7.5.4. How much complementation is possible between the different members of superfamily of SAM- dependent methyltransferases ?	230
7.6. Conclusions	231
7.7. References	232

CHAPTER 8. General discussion: Construction and performance of yeast bioreporter system	239
8.1. Introduction	240
8.2. Why <i>Saccharomyces cerevisiae</i> as a host organism?	244
8.3. The existing yeast bioreporter systems	245
8.4. The approach preferentially for constructing a bioreporter in this work	248
8.4.1. A good host strain shows high sensitivity to toxic compounds of interest	248
8.4.2. Essential genetic tools for construction of a bioreporter	249
8.5. Performance of constructed yeast bioreporter	250
8.6. Sensitivity of the constructed bioreporter system	251
8.7. Future outlook	253
8.8. References	254
