

INDEX

List of figures	VII
List of tables	XI
List of abbreviations	XII
List of greek letters	XIV

A	Introduction	A-1
1	Aim of film coating.....	A-3
2	Coating processes	A-4
2.1	Solution based coatings.....	A-4
2.2	Dispersion based coatings.....	A-5
2.3	Dry coating.....	A-7
3	Application and film formation of coating material performing the dry coating process.....	A-10
3.1	Material application	A-10
3.1.1	Capillary forces	A-11
3.1.2	Van der Waals forces.....	A-13
3.1.3	Electrostatic forces.....	A-15
3.1.4	Dependency of interparticle forces on different parameters.....	A-17
3.1.5	Frictional force	A-20
3.2	Film formation	A-22
4	Coating equipment.....	A-27
5	Materials	A-30
5.1	Coating materials.....	A-30
5.1.1	Delayed release polymers	A-30
5.1.2	Hydroxypropyl methylcellulose acetate succinate (HPMCAS, Aqoat [®]).....	A-32
5.2	Plasticizers.....	A-33
5.3	Anti tacking agents.....	A-36
5.4	Active pharmaceutical ingredient	A-37
6	Methods	A-39
6.1	Material characterization.....	A-39
6.1.1	Determination of particle size.....	A-39
6.1.2	Determination of surface tension of the plasticizers.....	A-40
6.2	Coated dosage form	A-40
6.2.1	Drug release studies	A-40

6.2.2	Coating efficiency	A-41
6.2.3	Sieving system.....	A-41
6.2.4	Ring shear tester	A-42
6.3	Coating process.....	A-47
6.3.1	Contact angle determination.....	A-47
6.3.2	Atomic force microscopy.....	A-48
6.3.3	Thermal analysis.....	A-52
6.3.3.1	Differential scanning calorimetry.....	A-53
6.3.3.2	Thermo mechanical analysis	A-54
6.3.4	Scanning electron microscopy.....	A-56
B	Aim of the study.....	B-57
C	Results and Discussion	C-58
1	Development of the coating process.....	C-58
1.1	Process equipment.....	C-58
1.2	Process performance.....	C-60
1.3	Formulation development and composition	C-62
1.4	Summary	C-64
2	Characterization of coated dosage forms and stability testing.....	C-66
2.1	Coating efficiency	C-66
2.2	Enteric resistance	C-68
2.2.1	Pellet core.....	C-68
2.2.2	Coated pellets.....	C-69
2.2.3	Stability of coated pellets	C-74
2.3	Agglomeration tendency during storage	C-79
2.3.1	Sieving.....	C-79
2.3.2	Ring shear tester	C-85
2.4	Summary	C-86
3	Mechanical view of coating material application and film formation.....	C-88
3.1	Coating material application.....	C-88
3.1.1	Application process of the coating material and consideration about the interparticle forces influencing the material application	C-89
3.1.2	Influence of wetting agents on the spreadability	C-91
3.1.3	Determination of interparticle forces emerging during the application	C-93
3.1.3.1	Influence of surface topography.....	C-93
3.1.3.2	Influence of the liquid additives on the interparticle interactions	C-96

3.1.4	Preparation of plasticized powders for analyzing the application during the dry coating process using the GPCG 1.1	C-99
3.1.4.1	Preparation of plasticized powders	C-100
3.1.4.2	Characterization of plasticized powders focusing the Tg	C-101
3.1.4.3	Determination of the free amount of plasticizer in the formulation	C-105
3.1.5	Summary	C-109
3.2	Film formation	C-111
3.2.1	Expectation of film formation process and study design	C-111
3.2.2	Film formation during coating phase	C-112
3.2.3	Determination of curing temperature and curing time	C-114
3.2.4	Glass transition temperature	C-121
3.2.5	Summary	C-123
4	Process optimization	C-125
4.1	Statistical design	C-125
4.1.1	Coating efficiency	C-127
4.1.2	Enteric resistance	C-133
4.1.3	Summary	C-136
5	Process transfer on GPCG 5	C-137

D Summary D-140

E Experimental part E-143

1	Characterization of coated dosage forms	E-143
1.1	Particle size measurement.....	E-143
1.2	Surface tension	E-143
1.3	Coating efficiency / Coating level.....	E-143
1.4	Batch division.....	E-144
1.5	Enteric resistance	E-145
1.6	Agglomeration tendency	E-146
1.6.1	Determination of residues	E-146
1.6.2	Determination of flowability	E-146
2	Coating material application and film formation	E-147
2.1	Differential scanning calorimetry.....	E-147
2.2	Thermo mechanical analysis	E-147
2.3	Contact angle measurement.....	E-147
2.4	Atomic force microscopy.....	E-148
2.4.1	Design.....	E-148

2.4.2	Substrate preparation	E-150
2.4.3	Tip preparation.....	E-150
2.4.4	Determination of spring constants	E-151
2.4.5	Determination of surface topography	E-151
2.4.6	Determination of adhesion and cohesion forces	E-152
2.5	Scanning electron microscopy	E-152
2.6	Thermo mechanical analysis	E-153
3	Process optimization.....	E-154
4	Process transfer / Determination of process parameters	E-155
F	Supply source of Materials.....	F-156
G	Bibliography.....	G-157
	Acknowledgements	XV
