List of Figures v

List of Tables x

Nomenclature xi

1 Introduction 1

2 Theory 3

2.1 Phenomenological Description of Turbulence . . . 3

2.1.1 The Energy Spectrum . . . 3

2.1.2 Statistical Description of Turbulence . . . 6

2.1.3 Anisotropy-Invariant Theory . . . 10

2.2 Governing Equations . . . 12

2.2.1 Governing Transport Equations . . . 12

2.2.2 Filtered Governing Transport Equations . . . 14

2.3 Turbulence Modeling . . . 17

2.3.1 Reynolds-Averaged Navier-Stokes Simulation . . . 18

2.3.1.1 Spalart-Allmaras Model . . . 22

2.3.1.2 SST Model . . . 23

2.3.2 Large Eddy Simulation . . . 25

2.3.2.1 Smagorinsky Model . . . 28

2.3.2.2 Deardorff Model . . . 29

2.3.3 Hybrid RANS/LES Approach and Detached Eddy Simulation . . . 30

2.3.3.1 Spallart-Allmaras DES Model . . . 34

2.3.3.2 SST DES Model . . . 34

2.4 Boundary and Initial Conditions . . . 37

2.4.1 Boundary Conditions . . . 37

2.4.1.1 Wall Boundary Condition . . . 37

2.4.1.2 Inflow Condition . . . 39

2.4.1.3 Outflow Condition . . . 42

2.4.1.4 Periodic Boundaries . . . 43

2.4.1.5 Symmetry Boundaries 43
2.4.2 Initial Conditions 44

3 Numerical Issues of Hybrid RANS/LES Models in Complex Geometries 45
3.1 Spatial Scheme 45
3.1.1 Order of Convergence 45
3.1.2 Numerical Dissipation 47
3.1.3 Hybrid Spatial Scheme 51
3.2 Temporal Scheme and Time Step Size 53
3.3 Meshing-Strategy 55
3.4 Mesh-Movement 56
3.4.1 Node-Movement 57
3.4.2 Interpolation 60

4 Test Cases 63
4.1 Decaying Homogeneous Isotropic Turbulence 63
4.1.1 Numerical Setup 64
4.1.2 Results 66
4.1.2.1 Numerical and Physical Dissipation 66
4.1.2.2 Impact of Grid Resolution 67
4.1.2.3 Turbulent Quantities 68
4.1.3 Summary 70
4.2 Flow over a Backward-Facing Step at low Reynolds Number 72
4.2.1 Numerical Setup 72
4.2.2 Results 73
4.2.2.1 Extent of the RANS and the LES Region 74
4.2.2.2 Comparison of time-averaged Flow Quantities 75
4.2.3 Summary 76
4.3 Vortex Shedding past a Triangular Obstacle at high Reynolds Number 78
4.3.1 Numerical Setup 78
4.3.2 Results 81
4.3.2.1 Steady and Transient Inlet Conditions 82
4.3.2.2 Statistical Turbulent Flow Quantities of URANS, LES, DES . 84

4.3.2.3 Differences between the Flow Characteristics of URANS and DES . . . 85
4.3.2.4 Investigation into the Anisotropy of Turbulence . . . 90
4.3.3 Summary . . . 93
4.4 Cyclic Variations in a Simplified Engine Setup . . . 94
4.4.1 Numerical Setup . . . 94
4.4.2 Results . . . 97
4.4.2.1 Flow Characteristics . . . 97
4.4.2.2 Cyclic Variation of the Tumbling Motion . . . 97
4.4.3 Summary . . . 105

5 Application of Hybrid RANS/LES to Flows in IC-Engines 106
5.1 Flow Characteristics in IC-Engines . . . 106
5.1.1 Driving Quantities in Turbulent Flows in IC-Engines . . . 106
5.1.1.1 Turbulent Scales and Reynolds Numbers . . . 106
5.1.1.2 Large Scale Motion and Production of Turbulence . . . 108
5.1.1.3 Discharge Coefficient . . . 112
5.1.2 Cycle-to-Cycle Variations . . . 115
5.2 Steady Flow Investigation of an Intake Port . . . 119
5.2.1 Experimental Setup . . . 119
5.2.2 Numerical Setup . . . 120
5.2.3 Results . . . 121
5.2.3.1 Extent of the RANS and the LES Region . . . 122
5.2.3.2 Discharge Coefficient and Statistical Convergence . . . 122
5.2.3.3 Averaged and Instantaneous Velocity Fields . . . 123
5.2.4 Summary . . . 128
5.3 Multi-Cycle Simulation of an IC-Engine . . . 130
5.3.1 Experimental Setup . . . 130
5.3.2 Numerical Setup . . . 132
5.3.3 Results . . . 134
5.3.3.1 Extent of the RANS and the LES Region . . . 136
5.3.3.2 Flow Characteristics . . . 137
5.3.3.3 Cyclic Variations . . . 137
5.3.4 Summary . . . 139

6 Summary and Conclusions **144**
