Contents

1. Introduction **1**

2. Stimulated Raman scattering in optical waveguides **4**
2.1. The Raman effect 4
2.2. Mathematical model of nonlinear wave coupling 5
2.2.1. Overview 6
2.2.2. Modal description of light propagation 8
2.2.3. Nonlinear coupling of spectral envelopes 11
2.2.4. Nonlinear Schrödinger Equation for temporal envelopes 13
2.2.5. Bulk nonlinear coefficients and effective areas 16
2.3. Raman amplification in optical fibers 19
2.3.1. Raman amplification in polarization-maintaining fibers 19
2.3.2. Raman amplification in standard single-mode fibers 21
2.3.3. Summary of the model 22
2.4. Chapter summary 23

3. Designs for efficient and tunable Raman fiber lasers **24**
3.1. Basics of Raman fiber lasers 24
3.1.1. History and applications 24
3.1.2. Geometry and working principle 25
3.1.3. Modeling, simulation, and typical characteristics 26
3.1.4. Conversion efficiency versus threshold 28
3.1.5. Comparison of left-hand- and right-hand-output RFLs 31
3.2. Double-cavity Raman fiber lasers 32
3.2.1. Geometry and model 33
3.2.2. Input-output characteristics 34
3.2.3. Comparison of optimized DC-RFLs and SC-RFLs 38
3.3. Widely tunable cascaded Raman fiber lasers 42
3.3.1. Motivation 42

3.3.2. Geometry and design considerations . . . 42
3.3.3. Modeling . . . 45
3.3.4. Design results . . . 46
3.4. Chapter summary . . . 48

4. Stability of Raman fiber lasers 49
4.1. Pump-to-Stokes RIN transfer in RFLs . . . 49
4.1.1. Significance of relative intensity noise in RFLs . . . 49
4.1.2. Experimental RIN spectra . . . 50
4.1.3. Modeling of pump-to-Stokes RIN transfer . . . 51
4.2. Optimization of RFLs for low-noise co-pumped Raman amplifiers . . . 56
4.2.1. Overview of the optimization task . . . 57
4.2.2. Dependence of Q penalty on RFL parameters . . . 58
4.3. Suppression of low-frequency RIN transfer in double-cavity RFLs . . . 60
4.3.1. Geometry and model . . . 60
4.3.2. Theoretical characteristics . . . 61
4.3.3. Experimental characteristics . . . 63
4.4. Stabilizing effect of line broadening . . . 65
4.4.1. Overview . . . 65
4.4.2. Power-dependent effective reflectivities . . . 66
4.4.3. Stabilizing effect on single-wavelength RFLs . . . 68
4.4.4. Stabilizing effect on multi-wavelength RFLs . . . 70
4.5. Chapter summary . . . 73

5. Raman gain and nonlinear absorption in silicon waveguides 74
5.1. Silicon waveguides . . . 75
5.2. Stimulated Raman scattering in silicon waveguides . . . 75
5.2.1. Properties of Raman gain in silicon . . . 76
5.2.2. Co- and counter-propagating effective areas . . . 78
5.3. Two-Photon Absorption . . . 82
5.3.1. Degenerate TPA . . . 83
5.3.2. Non-degenerate TPA . . . 87
5.4. Free-Carrier Absorption . . . 88
5.4.1. Steady-state charge-carrier density . . . 89
5.4.2. Optical absorption due to free carriers . . . 91
5.4.3. The effective carrier lifetime τ_{eff} . . . 92
5.5. Summary of the model . . . 94

5.6. Chapter summary 95

6. Analysis and design of silicon Raman amplifiers 96
6.1. Historical overview 96
6.2. Basic characteristics of silicon Raman amplifiers 97
6.2.1. Mathematical model 97
6.2.2. Amplifier characteristics 99
6.2.3. Maximum possible gain 101
6.3. Tapered Raman amplifiers 105
6.3.1. Principle 105
6.3.2. Optimal effective-area taper and maximum possible gain 108
6.4. Cladding-pumped Raman amplifiers 110
6.4.1. Geometry and principle 111
6.4.2. Results 112
6.5. Curvature loss in silicon waveguides 116
6.5.1. Modeling 117
6.5.2. Curvature loss in silicon rib waveguides 117
6.5.3. Insufficiency of semi-vectorial modeling 121
6.6. Chapter summary 122

7. Analysis and design of silicon Raman lasers 123
7.1. Basic characteristics of silicon Raman lasers 123
7.1.1. Geometry and model 123
7.1.2. Lasing and shutdown thresholds 125
7.1.3. Laser characteristics 127
7.2. Bidirectionally pumped silicon Raman lasers 129
7.2.1. Model 130
7.2.2. Lasing and shutdown thresholds 130
7.3. Tapered silicon Raman lasers 134
7.3.1. Modeling 134
7.3.2. Optimal non-tapered laser 135
7.3.3. Tapered lasers 136
7.3.4. Lasing and shutdown thresholds 137
7.4. Cascaded silicon Raman lasers as mid-infrared sources 138
7.4.1. Applications 138
7.4.2. Model 139
7.4.3. Conversion efficiency versus lifetime and pump wavelength 140

7.5. Chapter summary 143

8. Conclusions **144**

A. Finite-difference mode solver **147**

List of publications **149**

Bibliography **152**
