Introduction 1

1 Optical networks in practice 5
- 1.1 Optical technology . . . 7
  - 1.1.1 Optical transmission . . . 7
  - 1.1.2 Wavelength Division Multiplexing (WDM) . . . 10
  - 1.1.3 Switching . . . 13
  - 1.1.4 Wavelength conversion . . . 15
- 1.2 Operation of optical networks . . . 15
  - 1.2.1 Physical network . . . 16
  - 1.2.2 Data traffic . . . 17
  - 1.2.3 Optical connections and lightpaths . . . 19
  - 1.2.4 Virtual topology . . . 20
- 1.3 Survivability . . . 22
  - 1.3.1 Basic aspects . . . 23
  - 1.3.2 Known concepts . . . 24
- 1.4 Evolution and architectures . . . 29
- 1.5 Optical network planning . . . 31
  - 1.5.1 Network configuration . . . 31
  - 1.5.2 Network design . . . 34
  - 1.5.3 Preliminary specifications . . . 36

2 Modeling optical network design 39
- 2.1 Modeling framework . . . 40
  - 2.1.1 Hardware . . . 40
  - 2.1.2 Capacities . . . 43
  - 2.1.3 Connections . . . 44
  - 2.1.4 Cost . . . 45

2.2 Mathematical models . . . 46
2.2.1 Parameters and notation . . . 47
2.2.2 Opaque networks . . . 51
2.2.3 Transparent networks with single-hop traffic . . . 58
2.2.4 Transparent networks with multi-hop traffic . . . 62
2.2.5 Further aspects . . . 64
2.3 Realizing survivability . . . 69
2.3.1 Notation . . . 70
2.3.2 Demand-wise shared protection (DSP) . . . 72
2.3.3 Discussion and comparison . . . 90

3 Solving optical network design 95
3.1 Related work . . . 96
3.2 Solution approach . . . 99
3.3 Dimensioning and routing . . . 107
3.3.1 Transforming the problem . . . 108
3.3.2 Applying DISCNET . . . 116
3.3.3 Accomplishing solutions . . . 119
3.3.4 Methodology overview . . . 132

4 Wavelength Assignment with Converters 135
4.1 Problem specification . . . 136
4.2 Complexity . . . 140
4.3 Integer linear program formulations . . . 148
4.3.1 Assignment formulation . . . 148
4.3.2 Path packing formulation . . . 150
4.3.3 Formulation comparison . . . 152
4.4 Algorithms for MCWAP . . . 155
4.4.1 Heuristics . . . 155
4.4.2 Lower bounds . . . 164
4.4.3 An exact approach . . . 176

5 Computing survivable optical network designs 187
5.1 Instances and computational environment . . . 188
5.2 Computations for optical network design . . . 194
5.2.1 Reference solutions . . . 195
5.2.2 Survivability model alternatives . . . 202
5.2.3 Upgrade planning . . . 210
5.2.4 Extended hardware model . . . 214
5.2.5 Opaque scenario . . . 218
5.3 Computations for wavelength assignment . . . 221
5.3.1 Design computation results . . . 222
5.3.2 Instance set extension . . . 223
5.3.3 Lower bounds . . . 225
5.3.4 Improving solutions . . . 233

Conclusions 241

A Notation **245**

B Numerical data and results **249**
B.1 Traffic and topology data 249
B.2 Numerical results 253
B.2.1 Optical network design solutions 253
B.2.2 Wavelength assignment data 257

Bibliography **265**

Index **277**
