Abstract **v**

Sommario **vii**

List of Symbols **ix**

1 Introduction **1**

2 The Dynamic Torsion Test **7**
2.1 Introduction 7
2.2 Measurement principle 8
2.2.1 Description of the mechanical behavior at resonance 10
2.2.2 Phase stabilization loop 11
2.2.3 Modeling the dynamic behavior of the sensors 13
2.3 Sensors Design 15
2.3.1 The Torsional Resonator Device 16
2.3.2 The High Frequency Torsional Rheometer 22

3 Modeling the Interaction between Sensor and Material **29**
3.1 Introduction 29
3.2 Problem statement: forced torsional oscillations on a viscoelastic half-space 31
3.2.1 Analytical solution of the half-space problem 33
3.2.2 Extension of the solution to a layered half-space 40
3.2.3 Partially embedded vibrator 45
3.3 Finite element solution 45
3.3.1 Description of the FE approach with Abaqus 46
3.3.2 Convergence analysis and validation of the FE approach . . . 49
3.3.3 Capabilities of the FE model 53

3.4 Discussion . . . 56

4 Characterization of Soft Biological Tissues 61
4.1 Introduction . . . 61
4.2 Experimental procedure with the TRD . . . 63
4.3 Validation of the measurement method with silicone phantoms . . . 67
4.3.1 The Truth Cube 2 . . . 72
4.4 Results on soft biological tissues . . . 75
4.4.1 Repeatability . . . 75
4.4.2 Experiments with different bovine organs . . . 78
4.4.3 Frequency dependence . . . 79
4.4.4 Bi-layer model of the liver . . . 81
4.4.5 Combined experiments with the Aspiration Device . . . 83
4.5 Discussion . . . 86
4.6 Conclusions and outlook . . . 88

5 Characterization of Synthetic Materials 91
5.1 Introduction . . . 91
5.2 Laboratory aging tests of bituminous binders . . . 95
5.2.1 Dynamic mechanical analysis . . . 95
5.2.2 High frequency rheometry . . . 96
5.2.3 Material and samples preparation . . . 96
5.2.4 General binder characterization . . . 98
5.2.5 Effect of pressure and temperature . . . 100
5.2.6 Depth dependence of the material properties . . . 103
5.2.7 Discussion . . . 106
5.3 The Long term aging of bituminous binders . . . 107
5.3.1 Plug joint under investigation . . . 108
5.3.2 The long-term field test . . . 109
5.3.3 Extraction of the material parameters with the FE model . . . 111
5.3.4 Discussion . . . 113
5.4 Electroactive Polymers . . . 114
5.4.1 Samples characteristics and preparation . . . 115
5.4.2 Characterization of EAPs with dynamic torsion tests . . . 116
5.4.3 Comparison with standard uniaxial tests . . . 119
5.4.4 Discussion . . . 122
5.5 Conclusions . . . 122

6 Conclusions and Outlook 125

A Modeling the mechanical behavior of the sensors 129
A.1 Analytical model of the TRD . . . 129
A.2 Analytical Model of the HFTR . . . 135

B Comparison with quasi-static tests **137**
B.1 Hyperelastic material modeling 137
B.2 Aspiration experiments on bovine liver tissue ex-vivo 141
B.3 Uniaxial tests for the dielectric polymer VHB 4910 143

Bibliography **147**

Curriculum Vitae **155**
