TABLE OF CONTENTS

1 INTRODUCTION 1

1.1 Scope and aims of this research 1
1.2 The Volta River basin 3

2 GROUNDWATER IN THE VOLTA RIVER BASIN: HYDROGEOLOGY, DEVELOPMENT POTENTIAL AND CURRENT USE 4

2.1 Hydrogeology and groundwater development potential 4
2.2 Current groundwater use 6

3 DESCRIPTION OF THE STUDY AREA 10

3.1 Geology and Geomorphology 11
3.2 Soils 14
3.3 Climate 16
3.4 Land use and vegetation 18
3.5 Well locations and groundwater use 20

4 INSTRUMENTATION 24

4.1 Meteorological data recording 24
4.2 Groundwater level monitoring 26
4.3 Run-off measurements 27
4.4 Sampling for hydrochemical analysis 29

5 HYDROGEOLOGICAL PROPERTIES 31

5.1 Evaluation of borehole drilling profiles 32
5.2 Determination of hydraulic parameters from pumping tests 32
5.3 Results from groundwater level monitoring 37
5.3.1 Groundwater flow 37
5.3.2 Groundwater table fluctuation 41
5.3.3 Groundwater – surface water interaction 43
5.4 Hydrochemistry 44
5.5 Hydrogeological concept model 46

6 ASSESSMENT OF THE WATER BALANCE 48

6.1 Rainfall 48
6.2 Evapotranspiration 50
6.3 River run-off 51
6.3.1 Total run-off 51
6.3.2 Hydrograph separation by natural tracers 52
6.4 Groundwater recharge 55
6.4.1 Determination of groundwater recharge in semi-arid regions 56
6.4.2 Application of stable isotopes 18O/16O and 2H/1H 58
6.4.3 Application of the Chloride mass balance 65

6.4.4 Analysis of groundwater response to rainfall 69
6.4.5 Soil moisture balance modeling to determine groundwater recharge..... 75
6.4.6 Synthesis and discussion of results from the different approaches..... 82

7 INVERSE MODELING OF THE WATER BALANCE USING WASIM-ETH. 85

7.1 Description of WASIM-ETH 86
7.1.1 The unsaturated zone module 86
7.1.2 The groundwater module 87
7.1.3 Run-off routing 87
7.1.4 Initial conditions 88
7.1.5 Data requirements 88
7.1.6 Determination of the model quality 88
7.2 Input data 88
7.2.1 Meteorological input data 89
7.2.2 Land use input data 89
7.2.3 Soil input data 90
7.2.4 Hydrogeological data 92
7.2.5 Storage coefficients and drainage density..... 92
7.3 Testing of groundwater modeling in WaSIM-ETH..... 93
7.4 Sensitivity analysis 95
7.4.1 Sensitivity for the van Genuchten parameters Θs, Θr, α and n..... 96
7.4.2 Sensitivity for the aquifer hydraulic conductivity 97
7.5 Model set-up 98
7.6 Optimization 99
7.7 Model results and discussion..... 102

8 GROUNDWATER FLOW MODELING 106

8.1 Model geometry and boundary conditions 106
8.2 Parameter estimation 108
8.3 Groundwater balance and regional groundwater run-off 111

9 IMPLICATIONS FOR GROUNDWATER MANAGEMENT AND OUTLOOK..... 116
