<b>Nomenclature</b>	<b>xi</b>
<b>Einleitung</b>	<b>xvii</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Sliding-mode control</b>	<b>13</b>
2.1 The sliding-mode control problem . . . . .	13
2.2 Description of the sliding mode . . . . .	17
2.2.1 Filippov's method . . . . .	17
2.2.2 Equivalent control method . . . . .	18
2.3 Controller design . . . . .	19
2.3.1 Determining the control law using Liapunov method . . . . .	20
2.3.2 The SMC approach to the control of systems under matching condition . . . . .	20
2.3.3 The chattering problem . . . . .	21
2.4 Adaptive sliding-mode control . . . . .	23
2.4.1 Adaptive sliding-mode control for linear-in-parameter systems	23
2.4.2 Adaptive switching gain . . . . .	25
2.4.3 Adaptive sliding-mode control in discrete-time systems . . . . .	27
2.5 Neural-network based sliding-mode control . . . . .	27

2.5.1	Direct calculation of control using neural network . . . . .	28
2.5.2	Neural-network based adaptive switching gain . . . . .	30
<b>3</b>	<b>DASMC: Direct adaptive sliding-mode control</b>	<b>33</b>
3.1	Control of multi-link manipulators: an introductory example . . . . .	34
3.1.1	Dynamics of robot manipulators . . . . .	34
3.1.2	Sliding-mode control for robot manipulators . . . . .	34
3.1.3	The adaptive sliding-mode control scheme . . . . .	36
3.2	Problem statement . . . . .	37
3.3	Direct adaptive sliding-mode control . . . . .	39
3.4	Summary and discussion . . . . .	45
<b>4</b>	<b>ABSMC: Adaptive backstepping sliding-mode control</b>	<b>47</b>
4.1	A short survey of the backstepping algorithm . . . . .	47
4.2	Problem statement . . . . .	49
4.3	Adaptive backstepping sliding-mode control . . . . .	50
4.3.1	Backstepping design procedure . . . . .	50
4.3.2	Stability analysis . . . . .	55
4.4	Summary and discussion . . . . .	56
<b>5</b>	<b>Simulation studies</b>	<b>59</b>
5.1	Control of a Van der Pol System . . . . .	60
5.2	Control of a two-link robot manipulator . . . . .	65
5.3	DASMC versus ABSMC: Control of a flexible-joint manipulator . . . . .	74
5.3.1	The system model . . . . .	74
5.3.2	The controllers . . . . .	77
5.3.3	Simulation results . . . . .	81

5.4	Summary and discussion . . . . .	84
<b>6</b>	<b>Experimental results</b>	<b>87</b>
6.1	The flexible-joint module ROTFLEX . . . . .	87
6.2	Control of ROTFLEX . . . . .	89
6.2.1	The controllers . . . . .	89
6.2.2	Horizontal motion . . . . .	91
6.2.3	Vertical motion . . . . .	95
6.3	Summary and discussion . . . . .	100
<b>7</b>	<b>Conclusions</b>	<b>101</b>
	<b>Zusammenfassung und Ausblick</b>	<b>105</b>
<b>A</b>	<b>Matching condition in dynamic systems</b>	<b>109</b>
A.1	Matching condition in linear systems . . . . .	109
A.2	Matching condition in nonlinear systems . . . . .	111
A.2.1	Gutman's assumption . . . . .	111
A.2.2	Application to robust control of nonlinear systems . . . . .	112
<b>B</b>	<b>Modelling and control of flexible-joint manipulators</b>	<b>115</b>
B.1	Modelling of flexible-joint manipulators . . . . .	115
B.2	Control of flexible-joint manipulators . . . . .	116
B.2.1	Feedback linearization . . . . .	116
B.2.2	Singular-perturbation approach . . . . .	118
B.2.3	Robust control . . . . .	119
	<b>Bibliography</b>	<b>121</b>
