## TABLE OF CONTENTS

1	INTRODUCTION .....	1
1.1	Economic importance of pigeonpea .....	1
1.2	Constraints to productivity .....	3
1.3	Simple Sequence Repeat (SSR) marker development .....	5
1.4	Microsatellites from coding regions of the genome .....	7
1.5	Potential application of SSRs in pigeonpea .....	8
1.5.1	Geographical origin .....	8
1.5.2	Genotype identification and genetic diversity .....	8
1.5.3	Molecular linkage map and synteny .....	9
1.5.4	Trait tagging and Marker-Assisted Selection (MAS) .....	10
1.5.5	Association mapping .....	10
1.5.6	Map-based cloning .....	11
1.6	Objectives and outline of the thesis .....	11
2	MATERIALS AND METHODS .....	13
2.1	Plant material .....	13
2.2	Cloning vectors and bacterial strain .....	14
2.3	Fungal isolate .....	15
2.4	Standard primers, adaptors and oligonucleotide probes .....	16
2.4.1	Primers used during the study .....	16
2.5	Enzymes and solutions .....	16
2.5.1	Enzymes .....	16
2.5.2	Media and basic solutions .....	17
2.6	DNA extraction .....	19
2.6.1	Isolation of genomic DNA for library preparation .....	19
2.6.2	Isolation of genomic DNA for detecting polymorphism and genotyping .....	20
2.6.3	Isolation of plasmid DNA .....	20
2.6.4	DNA quantification .....	20
2.7	Development of microsatellite .....	21
2.7.1	Non-enriched library .....	21
2.7.2	Enriched library .....	22
2.8	Sequencing, sequence analysis and primer design .....	23
2.9	Functional analysis of pigeonpea sequences .....	24
2.10	PCR optimisation and product electrophoresis .....	25
2.11	Other sources of markers .....	26
2.12	Microsatellite nomenclature .....	27
2.13	Screening for polymorphism .....	27
2.14	Genotypic analysis .....	28
2.15	Preparation of fungal isolate, pots and seeds .....	28
2.16	Inoculation procedure .....	28
2.17	Preliminary screening .....	29
2.18	Optimisation of inoculum concentration .....	29
2.19	Evaluation of disease reaction phenotypes .....	29
2.20	Statistical analyses .....	29

3	RESULTS .....	32
3.1	Isolation and characterisation of microsatellite loci from pigeonpea.....	32
3.2	Primer Evaluation.....	35
3.2.1	Pigeonpea microsatellites .....	35
3.2.2	Soybean microsatellites .....	38
3.3	Functional characterisation of pigeonpea genomic sequences.....	40
3.3.1	Putative type I microsatellites.....	40
3.3.2	Coding capacity of sequences generated.....	42
3.4	Cross-Species amplification of pigeonpea microsatellites.....	44
3.5	Polymorphism of microsatellites in pigeonpea .....	45
3.5.1	Allelic diversity for markers generated from library A.....	46
3.5.2	Allelic diversity for markers generated from library B .....	49
3.5.3	Comparison of procedures used to develop microsatellites .....	53
3.6	Phenotypic data .....	55
3.6.1	Optimum inoculum concentration.....	55
3.6.2	Hypothesised genetics of resistance to <i>Fusarium</i> wilt .....	57
3.7	Recombinant Inbred Line (RIL) analysis.....	58
3.8	QTL analysis .....	59
4	DISCUSSION.....	60
4.1	Efficiency of pigeonpea microsatellite isolation.....	60
4.2	Characteristics of pigeonpea SSR markers .....	61
4.3	Microsatellite allelic diversity in pigeonpea .....	65
4.4	Comparative genomics application .....	67
4.5	Genetic diversity in pigeonpea germplasm .....	71
4.6	Mapping options – towards MAS in pigeonpea.....	72
4.7	Concluding remarks .....	73
5	REFERENCES .....	74
6	APPENDICES .....	87

## ACKNOWLEDGEMENTS
