Contents

Introduction	1
1 Laser theory	3
1.1 Interaction of radiation with matter	3
1.1.1 Absorption	4
1.1.2 Spontaneous emission	4
1.1.3 Stimulated emission	5
1.2 Creation of population inversion	6
1.3 The laser idea	8
2 Properties of laser materials	11
2.1 Rare earth ions	11
2.2 Host materials	15
2.3 Nonradiative relaxation by the multiphonon emission process	19
2.4 Ion-ion interaction	21
2.4.1 Energy transfer	21
2.4.2 Photon avalanche	24
2.4.3 Upconversion pumping process in Pr ³⁺ -doped glass	24
3 Spectroscopic properties of doped glasses	31
3.1 Transition cross-section	31
3.2 The glass samples	35
3.3 Absorption measurements	37
3.3.1 Analysis of measured spectra	38
3.3.2 Excited state absorption	40
3.4 Emission measurements	41
3.5 Lifetime measurements	47
3.5.1 Lifetime measurements of ³ P _j levels	48
3.5.2 Lifetimes of ¹ G ₄ level	53
4 Fiber lasers	55
4.1 The structure of an optical fiber	55
4.2 Loss mechanisms in optical fibers	57
4.3 Comparison of bulk and fiber lasers	58
4.4 Fiber laser applications in the visible spectrum range	60
4.5 Praseodymium-doped ZBLAN fiber lasers	61
4.6 Semiconductor diode lasers for the visible spectrum range	64
4.7 Second harmonic generation	66

5	Results of measurements on visible fiber lasers	68
5.1	Fiber laser configuration	68
5.1.1	Ti:Sapphire laser	69
5.1.2	Coupling of pump power to a fiber	70
5.1.3	The fiber end-mirror interface	71
5.1.4	Properties of ZBLAN fibers doped with Pr ³⁺ /Yb ³⁺	73
5.2	Visible fiber lasers in Fabry-Perot configuration	75
5.2.1	Setup for fiber laser characterization	75
5.2.2	Red fiber laser	76
5.2.3	Fiber laser emitting green light	78
5.2.4	Fiber laser emitting blue light	80
5.2.5	Laser characteristic for different fiber lengths	82
5.2.6	Optimal pump wavelength	84
5.2.7	An avalanche process in the fiber	85
5.2.8	Influence of mirror reflectivity on red laser performance	87
5.2.9	Optimization of fiber length	89
5.3	Laser output stability	91
5.3.1	Stability of fiber lasers	92
5.3.2	Relaxation oscillations	92
5.3.3	Noise suppression	95
5.3.4	Long-term stability	96
6	All-fiber laser with red emission	98
6.1	Fused fiber couplers	98
6.2	Connecting fluoride and silica fibers	102
6.3	Red fiber laser in ring configuration	105
6.4	Thermally diffused expanded core (TEC) technique	114
6.5	Red laser with a fiber Bragg grating	115
6.6	Fiber laser based on loop mirrors	119
7	Tunable fiber laser	122
7.1	External grating reflectors	122
7.2	Orange-red tunable fiber laser	123
7.3	Superfluorescence source	127
	Conclusions	130
	References	131
	Appendix	141
