Contents

1	Introduction	1
2	Model description	9
2.1	Molar- and mass-based reactions	9
2.2	Governing equations	11
2.3	Chemical reactions	12
2.4	Pipe flow	13
2.5	Plug flow	14
2.6	Mechanism reduction	15
2.6.1	Carbon Atom Screening (CAS)	15
2.6.2	Production Rate Screening (PRS) and Rate-of-Progress Screening (RPS)	16
2.7	Definition of the first-stage ignition delay time	17
2.8	Calculation flow	19
3	Experimental apparatus	21
3.1	Laminar flow reactor	21
3.2	Gas supply system	25
3.3	Power supply system	28
3.4	Data acquisition system	30
3.5	Gas sampling system	31
3.6	Experimental parameters and methods	31

4	Evaluation of the laminar flow reactor	35
4.1	Experimental visualization	35
4.2	Influence of the fuel injector	36
4.3	Mixing field	41
5	Low temperature ignition of nC_7H_{16}	47
5.1	Determination of temperature from experimental conditions	47
5.2	Heat loss estimation	48
5.3	Calculation of τ_{1st} from L_{ign}	51
5.4	Mechanism screening	52
5.5	The first-stage ignition of nC_7H_{16}	53
5.6	Influence of equivalence ratio and dilution	64
5.7	Further reduction	70
5.8	Steady state assumption	72
5.9	Simplified eigenvalues	74
5.10	Analytical expression of τ_{1st}	81
6	Low temperature ignition of DME	85
6.1	Temperature range and heat loss	85
6.2	The first-stage ignition of DME	88
6.3	Differences of the mechanisms in LTC for DME	91
6.4	Reduction for the induction period	100
6.5	Steady-state assumption	103
6.6	Theoretical analysis of τ_{1st}	104
7	Low temperature ignition of the blended fuels	109
7.1	Experimental investigations with blended fuels	110
7.2	Comparison of τ_{1st} for different blended fuels	115
7.3	Numerical investigations with blended fuels	116
7.4	Model reduction at the induction period	119
7.5	Eigenvalue determination	124
7.6	Analytical solution of τ_{1st} with blended fuel	129

<i>CONTENTS</i>	ix
8 Conclusion and future work	135
References	137
A Chem. mech. for lean DME/nC_7H_{16} mixture	155
B Ordinary differential equations	159
B.1 Homogeneous system	159
B.2 Inhomogeneous system	161
B.3 Steady-state assumption	162
B.4 Two intermediates model for nC_7H_{16}	165
B.5 Mechanism reduction	169
C Time evolution of functions	173
C.1 Quadratic (2nd-degree) polynomial	173
C.2 n th roots	176
C.3 Influence of z_{im} on the time evolution of z_{comp}	178
D Solution of higher polynomial	181
D.1 Quartic (4th-degree) polynomial	181
D.2 Cubic (3rd-order) polynomial	183
E Detailed information of the LFR	187
E.1 Fuel injector and fuel supplying pipe	187
E.2 Mesh for the CFD calculations	188
E.3 2-D analysis	188
E.4 Analysis of the mixing field	196
E.5 Spontaneous 2nd-stage ignition in the LFR	198
