

TABLE OF CONTENTS

1	GENERAL INTRODUCTION	1
1.1	Problem setting	1
1.2	The potential and challenge of afforestation of degraded land	2
1.3	Research objectives	5
1.4	Outline of the thesis	5
2	STUDY REGION	7
2.1	Geographical and demographical information	7
2.2	Climate	8
2.3	Relief, geomorphology, hydrogeology and soils	9
2.4	Irrigation and drainage network	10
2.5	Land use	11
2.5.1	Forestry	12
3	ASSESSING THE POTENTIAL OF TREES FOR AFFORESTATION OF DEGRADED LAND	15
3.1	Introduction	15
3.2	Materials and methods	16
3.2.1	Study sites	16
3.2.2	Experimental design	18
3.2.3	Biometric parameters and survival rates	19
3.2.4	Above- and below-ground dry matter production	19
3.2.5	Nutritional and calorific values	20
3.2.6	Statistical analyses	21
3.3	Results and discussion	21
3.3.1	Establishment and growth characteristics	21
3.3.2	Nutritional value of leaves	27
3.3.3	Fuelwood characteristics	28
3.4	Conclusion and recommendations	30
4	PHYSIOLOGICAL AND MORPHOLOGICAL ATTRIBUTES OF THE TREE SPECIES FOR EARLY DETERMINATION OF THEIR SUITABILITY FOR AFFORESTATION	33
4.1	Introduction	33
4.2	Materials and methods	35
4.2.1	Study sites	35
4.2.2	Plant material	35
4.2.3	Height, diameter, biomass, and leaf area	36
4.2.4	Experimental design and data analyses	36
4.3	Results and discussion	37
4.3.1	Conventional growth assessment parameters	38
4.3.2	Correspondence of RGR to the conventional growth parameters	41
4.3.3	RGR and its underlying components	41
4.4	General discussion	45

4.4.1	RGR and its underlying components.....	45
4.4.2	Suitability of RGR to select species for afforestation	46
4.5	Conclusions	47
5	BIODRAINAGE POTENTIAL OF THE MULTIPURPOSE TREE SPECIES...	49
5.1	Introduction	49
5.2	Materials and methods.....	50
5.2.1	Study sites.....	50
5.2.2	Experimental design	52
5.2.3	Transpiration rates and leaf area.....	52
5.2.4	Biomass	53
5.2.5	Groundwater table fluctuation and salinity	54
5.2.6	Statistical analyses.....	54
5.3	Results	54
5.3.1	Above-ground biomass.....	54
5.3.2	Root growth parameters.....	55
5.3.3	Transpiration.....	59
5.3.4	Water use efficiency	60
5.4	Discussion.....	62
5.4.1	Influence of environmental factors on transpiration.....	63
5.4.2	Influence of tree morphology on transpiration	64
5.4.3	Water use efficiency	65
5.5	Conclusions	66
6	ESTABLISHMENT AND GROWTH OF SELECTED TREE SPECIES UNDER DRIP AND FURROW IRRIGATION ON MARGINAL LAND	67
6.1	Introduction	67
6.2	Materials and methods.....	68
6.2.1	Study site	68
6.2.2	Experimental design	69
6.2.3	Survival rates and biomass	71
6.2.4	Chemical analysis of leaves.....	71
6.2.5	Environmental parameters.....	72
6.2.6	Statistical analyses.....	72
6.3	Results	72
6.3.1	Environmental conditions.....	72
6.3.2	Survival	75
6.3.3	Above-ground growth	76
6.3.4	Below-ground growth.....	78
6.3.5	Mineral content in leaves.....	81
6.4	Discussion.....	82
6.4.1	Effects of irrigation technique on tree growth.....	82
6.4.2	Growth response	83
6.4.3	Perspectives for future afforestation.....	84
6.5	Conclusions	85

7	LEAF AND STAND TRANSPIRATION OF THE TREE SPECIES GROWN ON MARGINAL LAND	87
7.1	Introduction	87
7.1.1	Materials and methods.....	88
7.1.2	Study site	88
7.1.3	Transpiration, stomatal resistance, and leaf area.....	89
7.1.4	Stand evapotranspiration	90
7.1.5	Decoupling coefficient	91
7.1.6	Growth rate	92
7.1.7	Statistical analyses.....	92
7.2	Results	93
7.2.1	Meteorological factors.....	93
7.2.2	Soil water conditions	94
7.2.3	Growth rates and leaf area index	99
7.2.4	Leaf transpiration rates	101
7.2.5	Aerodynamic and canopy conductances and stand evapotranspiration	103
7.2.6	Influence of atmospheric parameters and stomatal control.....	105
7.3	Discussion.....	107
7.3.1	Leaf and canopy transpiration	107
7.3.2	Evaluation of environmental factors determining transpiration.....	108
7.3.3	Evaluation of stomatal control of transpiration	109
7.3.4	Methodological implications	110
7.4	Conclusions	110
8	CONCLUSIONS AND OUTLOOK	112
8.1	Potential of tree species for afforesting degraded land.....	112
8.2	Performance of the selected species on marginal land.....	114
8.3	Implications of the research for further studies	115
8.3.1	A follow-up on nitrogen-fixing tree species.....	116
8.3.2	Biodrainage potential of afforestation	116
8.3.3	Implication for socio-economic studies.....	117
8.4	Overall conclusions	118
