

Contents

Preface	1
1 Basic Train Classification	7
1.1 Practical Railway Problem	7
1.1.1 Classification Yard Layout	7
1.1.2 Basic Yard Operation	9
1.1.3 Sorting Requirements and State-of-the-Art Methods	10
1.1.4 Objectives and Constraints	13
1.1.5 Related Concepts and Problems	15
1.2 Theoretical Solution Approach	16
1.2.1 Related Work	16
1.2.2 Abstract Setting and Notation	17
1.2.3 Classification Schedule Representation . .	21
1.2.4 Feasible Schedules	24
1.2.5 Deriving Optimal Schedules	32
1.2.6 Traditional Methods Revisited	39
1.2.7 Optimizing the Order of Inbound Trains .	43
1.3 Summary	47
2 Train Classification for Limited Track Capacities	49
2.1 Setting and Further Notation	49
2.2 Related Work	50
2.3 Optimal Integer Programming Approach	51
2.4 Algorithmic Approximations	52
2.4.1 Basic 2-Approximation	52
2.4.2 A Condition for Optimality	57
2.4.3 Heuristic Improvements	58

2.5	Experimental Evaluation	62
2.5.1	Experimental Setup	62
2.5.2	Experimental Results	67
2.6	Summary	75
3	Train Classification with Further Restrictions	77
3.1	Overview and Related Work	77
3.2	Limited Number of Sorting Tracks	79
3.2.1	Setting, Example, Notation	79
3.2.2	Deriving Feasible Schedules	80
3.2.3	Optimal Schedules	84
3.3	Further Restrictions in Practice	86
3.3.1	Parallel Sorting Procedures	86
3.3.2	Number of Output Tracks	87
3.3.3	Train Departure Times	88
3.4	Extended Integer Programming Approach	89
3.4.1	Parallel Sorting Procedures	89
3.4.2	Available Classification Tracks	91
3.4.3	Train Departure Times	92
3.5	Case Study: Lausanne Triage	93
3.5.1	Classification Yard Lausanne Triage	93
3.5.2	Schedule Computation	94
3.5.3	Computed Schedules	95
3.5.4	Simulation	96
3.6	Summary	98
4	Recovery Robust Train Classification	101
4.1	Introduction	102
4.1.1	Notions of Robustness and Related Work	102
4.1.2	Robust Problem Setting	103
4.1.3	Further Notation	105
4.2	Model of Recovery	106
4.2.1	Additional Sorting Steps	106
4.2.2	Best Point for Additional Steps	108
4.2.3	Responding to Revealed Scenarios	111
4.3	General Scenarios	113
4.3.1	Optimal Algorithm	113
4.3.2	Computational Complexity	117

4.4	Limited Numbers of Delay	120
4.4.1	Scenario Model	121
4.4.2	Dominating Set of Scenarios	122
4.4.3	Maximum Recoverable Sets of Breaks	124
4.4.4	Experimental Evaluation	129
4.5	Types of Cars	134
4.5.1	Model and Notation	134
4.5.2	Optimal Algorithm	136
4.5.3	Example	140
4.6	Summary	141
	Conclusion	143
	Bibliography	145
	Nomenclature	153
	Shunting Glossary	157
