CONTENTS

1. Introduction	1
1.1 Closed-loop learning experiments	3
1.2 Optimal control theory	4
2. Quantum optimal control theory	7
2.1 Concepts and conventions	7
2.2 Derivation of the control equations	10
2.2.1 Variation of J	11
2.2.2 Control equations	12
2.2.3 Target operators	13
2.3 Algorithms to solve the control equations	15
2.4 Example: Two-level system	18
2.4.1 Two-level system: Basics	18
2.4.2 Complete controllability	27
2.4.3 Optimal control	28
2.4.4 Discussion and summary	30
3. Constraints on the laser field	33
3.1 Theory and algorithms	34
3.1.1 Fluence constraint	34
3.1.2 Generalized filtering technique	36
3.1.3 Generalized filtering technique with fluence constraint	38
3.2 Application to a model potential	39
3.2.1 Fixed fluence	41
3.2.2 Energy versus yield	44
3.2.3 Direct transition	45
3.2.4 Selective transfer via intermediate state $ 2\rangle$	48
3.2.5 Selective transfer via intermediate state $ 3\rangle$	48
3.2.6 Band filter: Low-frequency pulse	50
3.2.7 Phase-only optimization	54
3.3 Summary and outlook	57
4. Time-dependent control targets	59
4.1 Extension of the control formalism	60
4.1.1 Time-dependent control equations	60
4.1.2 Target operators	61
4.1.3 Algorithm for time-dependent control targets	63
4.1.4 Algorithms for time-dependent control targets with constraints	64

4.2	Asymmetric double well: Path-selective excitation	65
4.3	Optimal trajectory control in a 2D nanostructure	68
4.3.1	Indirect route	71
4.3.2	Direct route	73
4.4	Summary and outlook	76
5.	Optimal control theory for many-particle systems	77
5.1	OCT for many-particles: Formalism and examples	77
5.1.1	Two-particle example	78
5.1.2	Two-particle example - noninteracting	80
5.2	Basics of TDDFT	88
5.2.1	Runge-Gross theorem	88
5.2.2	Time-dependent Kohn-Sham equations	89
5.3	OCT and TDDFT	91
5.3.1	Control targets	91
5.3.2	TDDFT-OCT functional	93
5.3.3	Derivation of the control equations	94
5.3.4	Algorithms to solve the control equations	97
5.4	Application to a two-particle problem	98
5.4.1	Computational details	98
5.4.2	Projection operator with first excited Kohn-Sham determinant	100
5.4.3	Local operator with target density	104
5.4.4	A projection operator based on a target density	105
5.5	OCT for N -level systems using TDDFT	109
5.5.1	Extraction of the N -level Hamiltonian via TDDFT	109
5.5.2	Application to 1D helium	112
5.6	Tracking method in the TDDFT context	114
5.6.1	Dipole tracking for many-body systems	115
5.6.2	TDDFT applied to dipole tracking	116
5.7	Summary and outlook	117
6.	Summary and outlook	121
	Bibliography	129
	Appendix	131
A	Atomic units	131
B	The dipole approximation	131
C	Numerical details	134
D	Influence of the numerics on the optimization	137
E	Derivation of the spectral filter from a functional	139
F	Functional for simple pulse shapes	140
G	Time-frequency analysis	141
H	Tracking	141
I	Functional for robust pulses	144
