

Cheikh Dieng (Autor)

**Tree Species Diversity Assessment and Utilization of
Biodiversity Indices in the South Forests of Senegal**

***Tree Species Diversity
Assessment and Utilization
of Biodiversity Indices in the
South East Forests of Senegal***

Contents	page
1. Introduction	1
1.1. General introduction	1
1.2. Definitions of biodiversity	5
1.3. Biodiversity measurements	6
1.3.1. Monitoring at landscape level	6
1.3.2. Monitoring at species level	6
1.3.3. Genetic monitoring	7
1.4. Objectives of the study	8
2. Literature review	10
2.1. Measuring species diversity	10
2.1.1. Species richness	10
2.1.2. Species abundance	10
2.1.3. Taxic diversity	10
2.2. Effect of sample size	11
2.3. The problem of non randomness	12
2.4. Spatial pattern	13
2.5. Sampling rare species	14
2.6. Vegetation classification	16
2.6.1. Yangambi classification	16
2.6.2. Impact of fragmentation in loss of species	18
2.7. Inference to population diversity	18
2.8. Differentiation diversity	20
2.9. Some applications of diversity measures	22
2.9.1. Environmental assessment	22
2.9.2. Conservation and nature management	23
2.9.3. Comparison of different areas	23
2.9.4. Identifying priority areas of biodiversity protection	24

3. Material and methods	25
3.1. Study area description	25
3.1.2. Woodland	25
3.1.3. Savanna woodland	26
3.1.4. Tree savanna	27
3.1.5. Shrub savanna	27
3.1.6. Fallow	28
3.2. Data collection	29
3.2.1. Cartography	29
3.2.2. Inventory	31
3.3. Species richness	35
3.3.1. Species richness indices	35
3.3.2. Assessment of 'virtual species'	36
3.4. Species abundance models	36
3.4.1. The geometric series	38
3.4.2. The log series	39
3.4.3. The log normal series	40
3.4.4. The broken stick model	40
3.4.5. The Q statistic	41
3.5. Indices based on proportional abundance of species	42
3.5.1. The Shannon index H	42
3.5.2. The Brillouin index	44
3.6. Dominance measures	44
3.6.1. The Simpson's Index D	44
3.6.2. Mc Intosh measure	44
3.6.2. Berger parker index	45
3.7. Jack-knifing indices	46

4. Results	47
4.1. Species richness	47
4.1.1. Species richness indices	47
4.1.2. Assessment of 'virtual species'	48
4.2. Adjustment to species abundance models	52
4.2.1. The geometric series	52
4.2.2. The log series	57
4.2.3. The log normal series	61
4.2.4. The broken stick model	61
4.2.5. The Q Statistic	63
4.3. Assessment of tree diversity on forest degradation	66
4.3.1. Impact on species richness indices	67
4.3.2. Impact on dominance indices	68
4.4. Impact of the legal status of the forest on tree diversity	77
4.4.1. Impact on species richness	79
4.4.2. Impact on dominance	81
5. Conclusion / Recommendations	82
6. Summary	86
6.1. English summary	86
6.2. German summary	87
7. Bibliography	89
Appendix 1 : List and number of species collected for each region and stratum	93
Appendix 2: Correspondent table of code species names	106
