Preface	iii
Curriculum Vitae	v
1 Introduction	1
1.1 Notation	4
2 A class of dissipative Schrödinger operators	7
2.1 Dissipative Schrödinger operator	8
2.2 Characteristic function and dilation	18
2.3 Some scattering theory	27
2.4 An example	31
2.5 Notes	32
3 Dissipative Schrödinger–Poisson systems	37
3.1 Steady states of a dissipative Schrödinger operator	39
3.2 The macroscopic quantities	43
3.2.1 Particle density	43
3.2.2 Current density	46
3.3 Dissipative Schrödinger–Poisson system	49
3.4 An example (continued)	54
3.5 Notes	56
4 Quantum transmitting Schrödinger–Poisson systems	59
4.1 Schrödinger operator with steplike potentials	64
4.2 Quantum transmitting boundary family	78
4.3 Steady states of a quantum transmitting boundary family	84
4.4 Macroscopic quantities	88
4.4.1 Particle density	88
4.4.2 Current density	90
4.5 Quantum transmitting Schrödinger–Poisson system	92
4.5.1 The unipolar case	92
4.5.2 The bipolar case	97
4.6 Notes	100
5 Coupled Schrödinger drift–diffusion models	105
5.1 Presentation of the method	106
5.1.1 The quantum model	107
5.1.2 The classical model	108
5.1.3 The hybrid model	110
5.2 Three test devices	116
5.2.1 The RTD of Mounaix <i>et al</i> [56]	117
5.2.2 The RTD of Kluksdahl <i>et al</i> [49]	126
5.2.3 The RTD of Fischetti [30]	130
5.3 Notes	134
References	137
Nomenclature	143
Index	149
