

Preface

This dissertation is submitted in fulfillment of a doctors degree in Engineering at the university of Ulm, Germany. The work in this thesis has been carried out at the Department of Microwave Techniques and was part of a research project funded by Deutsch Forschung Gesellschaft (DFG).

I wish to express my sincere gratitude to my supervisor professor Dr.-Ing. Wolfgang Menzel, the head of the Microwave Techniques Department, for the opportunity to work on such a valuable research topic. I thank him especially for his encouragement and patience in helping me to conduct this research and completing this thesis.

I would also like to thank the colleagues at the Department, who helped me considerably during the early stages of this research. My special thank goes to Dr.-Ing. Frank Bögelsack for the fruitful discussions which made it possible to finish my work.

Finally, I am indebted to my generous family and husband who have always encouraged me and have done their best to make me attain this achievement.
