

Contents

Introduction	1
1 Optical transmission systems	4
1.1 Semiconductor amplifiers in optical communication systems	6
1.2 Raman amplifiers in transmission systems	7
1.3 Applications of the rare-earth doped fiber amplifiers	9
1.3.1 EDFA for C-band applications	10
1.3.2 GS-EDFA for L-band applications	11
1.3.3 Fiber amplifiers for S- and S ⁺ -band applications	11
1.4 Optical amplifiers - comparison	13
2 Thulium-doped fiber amplifier - operation principles	15
2.1 Energy levels of thulium	15
2.2 Low phonon energy glasses	17
2.3 Amplification process in TDFA	20
2.4 Basic parameters of the TDFA	23
2.4.1 Signal gain	24
2.4.2 Noise figure and its management in the optical fiber amplifier	26
2.4.3 Power conversion efficiency and quantum efficiency	29
3 Spectroscopic properties of thulium in fluoride glasses	31
3.1 Refractive index measurement for ZBLAN and IBZP glass samples	36
3.2 Ground State Absorption (GSA)	37
3.2.1 Measurement setup and procedure	38
3.2.2 Measurement of the intrinsic losses for ZBLAN and IBZP glasses . . .	39
3.2.3 Analysis of measured spectra	40
3.2.4 Comparison with the literature	44
3.3 Excited State Absorption (ESA)	47
3.3.1 “ <i>Pump-and-probe</i> ” measurement method	48
3.3.2 Modified measurement method	49
3.3.3 Analysis of the measured spectra	51
3.3.4 Comparison with the literature	54
3.4 Emission	57
3.4.1 Measurement setup and procedure	57
3.4.2 Analysis of measured spectra	59
3.4.3 Comparison with the literature	60
3.5 Lifetime measurements	62
3.5.1 Measurement setup and procedure	62

3.5.2 Concentration quenching	64
3.5.3 Comparison with the literature	66
3.6 Comparison of ZBLAN and IBZP as a host-glass for the TDFA	67
4 Fiber couplers for TDFA	70
4.1 Coupled-mode theory	73
4.2 Simulations of the biconical fused coupler	75
4.3 Coupler model's verification	77
4.4 Special couplers for TDFA	79
4.4.1 Examples of 2λ -WDM couplers	80
4.4.2 Examples of 3λ -WDM couplers	82
5 Fiber connection techniques	85
5.1 Thermal fiber connecting methods	86
5.2 Thermally-diffused expanded core (TEC) technique	87
5.3 Non-thermal fiber connecting method	91
5.3.1 Thermal and mechanical properties of SiO_2 and ZBLAN glasses	92
5.3.2 Requirements for the glue	93
5.3.3 Application of the glue-splicing technique - setup and procedure	95
5.3.4 Attenuation and reflection of the glue-splice	96
5.4 Durability tests	102
5.4.1 Low power measurements	102
5.4.2 High power measurements	103
5.4.3 Thermal stability of the glue-splices	105
6 Numerical TDFA model	108
6.1 Simulation parameters	110
6.2 Model description	110
6.3 Special aspects of TDFA simulations	115
6.3.1 Dual-wavelength pumped TDFA	116
6.3.2 Gain shifting process in single-wavelength pumped amplifier	117
6.3.3 TDFA with co-operating ring fiber laser	121
7 Measurements on thulium-doped fiber amplifiers	124
7.1 Properties of active fibers	124
7.2 Single-wavelength pumped TDFA	126
7.2.1 Cross-relaxation in highly-doped active fiber	126
7.2.2 Measurements on the fiber amplifier	131
7.3 Dual-wavelength pumped TDFA	137
7.3.1 Pumping scheme 805+1056 nm	137
7.3.2 Pumping scheme 805+1412 nm	141
7.4 TDFA with cooperatively working laser	142

7.4.1	Fiber laser operating at around 1900 nm	143
7.4.2	Performance of the amplifier	144
Conclusions		147
Publications		165
