This “European joint-PhD” (named “cotutelle” in french) was carried out at the European Center for Atomic and Molecular Computations (CECAM), at the Max Planck Institute for Polymer Research in Mainz (MPIP) and at the Theoretical Physics Department of Bielefeld University. It was supported by the French Ministry for Research, by the “Région Rhônes Alpes” and by the CECAM.

Contents

Summary	iii
Résumé (French summary)	v
Zusammenfassung (German summary)	vii
Introduction	ix
1 Simulation of smectics: model and method	1
1.1 Off-lattice, coarse-grained model	1
1.1.1 Models of lamellar phases	1
1.1.2 Definition of the model	3
1.1.3 Phenomenology of the model	6
1.2 Method: numerical simulations	10
1.2.1 General introduction	10
1.2.2 Simulation of smectics	15
1.2.3 $(N, P, T, \gamma = 0)$ algorithm	22
2 Characterization of the smectic phase	31
2.1 Smectic ordering	31
2.1.1 Qualitative approach	31
2.1.2 Orientational order parameter	33
2.1.3 Translational order parameter	33
2.1.4 Interlamellar distance	36
2.2 Structure of the lamellar phase	37
2.2.1 Typical systems	37
2.2.2 Anisotropy of the diffusion	39
2.2.3 Density and composition profiles	40
2.2.4 Pressure profiles	40
3 Fluctuations of bilayers	45
3.1 Elasticity of the lamellar phase	45
3.1.1 Elasticity of single bilayers	45
3.1.2 Thermal fluctuations in the lamellar phase	51
3.2 Simulation results	58
3.2.1 Analysis of the configurations	58
