

TABLE OF CONTENTS

1	MULTI-AGENT SYSTEM FOR SIMULATING LAND-USE/COVER CHANGE: A NEW MINDSET FOR AN OLD ISSUE	1
1.1	Background	1
1.1.1	The issue of land-use and land-cover change	1
1.1.2	The need to model LUCC processes for supporting proactive land management.....	2
1.2	Problem analyses in LUCC modeling	5
1.2.1	Complex nature of LUCC processes	5
1.2.2	The need for an integrated framework for modeling LUCC	13
1.2.3	Problem statements.....	15
1.3	The Multi-Agent System (MAS) for simulating LUCC: the paradigm shift.....	16
1.3.1	Traditional approaches in LUCC modeling.....	16
1.3.2	Multi-Agent System Simulation (MASS) for studying complex adaptive systems	18
1.4	Research objectives	25
1.5	Outline of the thesis.....	26
2	MULTI-AGENT SYSTEM CONCEPTS, METHODS AND A PROPOSED CONCEPTUAL MAS-LUCC MODEL	29
2.1	Introduction	29
2.2	Basic concepts of Multi-Agent System (MAS).....	30
2.2.1	Definition and interpretation of Multi-Agent System	30
2.2.2	The concept of agent	30
2.2.3	Environment in multi-agent system.....	33
2.2.4	Interactions	35
2.3	Agent architecture	38
2.3.1	Production rules system and reflex decision-making mechanism.....	39
2.3.2	Parameterized functions and goal-directed decision-making	42
2.4	Computer platform for MAS	49
2.4.1	Generic object-oriented programming (OOP) languages	49
2.4.2	MAS libraries/toolkits	50
2.4.3	MAS packages.....	51
2.5	VN-LUDAS: A proposed conceptual MAS framework for modeling LUCC	53
2.5.1	Formulising the system of landscape environment	53
2.5.2	Formulising the system of human population	54
2.5.3	Means of human-environment interactions	55
2.5.4	Land-use related policies as external drivers.....	56
2.6	Selection of the study site.....	56
2.7	Modeling steps	59
3	THEORETICAL SPECIFICATION OF VN-LUDAS: A MULTI-AGENT SYSTEM FOR SIMULATING LAND-USE AND LAND-COVER CHANGE	62
3.1	Introduction	62
3.2	Specification of VN-LUDAS architecture	63
3.2.1	System of human population: The HOUSEHOLD-POPULATION module	64
3.2.2	System of landscape environment: The PATCH-LANDSCAPE module	77

3.2.3	Structure of DECISION module (program)	88
3.2.4	The GLOBAL-POLICY module	105
3.3	Main steps of the simulation process: The simulation protocol of VN-LUDAS.....	109
3.4	Conclusion.....	115
4	LAND-USE DECISIONS BY HETEROGENEOUS HOUSEHOLD AGENTS: THE CASE OF HONG HA COMMUNITY, THE CENTRAL COAST OF VIETNAM	117
4.1	Introduction	117
4.2	Socio-economic setting of the study site.....	119
4.2.1	Geographic location and boundary of the study area	119
4.2.2	Population.....	120
4.2.3	Main land-use types.....	121
4.3	Methodology	123
4.3.1	Methods for categorizing household agents	123
4.3.2	Methods for estimating spatial behavior of categorized households to land-use choices.....	126
4.3.3	Data sources.....	131
4.4	Results and discussions	134
4.4.1	Identification of typological agent groups.....	134
4.4.2	Modeling land-use choices for each typological household agent group.....	141
4.5	Conclusions	149
5	ECOLOGICAL DYNAMICS OF HETEROGENEOUS LANDSCAPE AGENTS: THE CASE OF HONG HA WATERSHED, CENTRAL VIETNAM UPLANDS	152
5.1	Introduction	152
5.2	Bio-physical setting of the study area	154
5.2.1	Climate	154
5.2.2	Soils	155
5.2.3	Vegetation.....	157
5.3	Methodology	157
5.3.1	Methods of landscape characterization.....	157
5.3.2	Method for modeling agricultural yield response.....	164
5.3.3	Method to specify forest yield functions	172
5.3.4	Method for modeling natural transition among land-cover types: the <i>NaturalTransition</i> sub-model	183
5.4	Results and discussion.....	186
5.4.1	Landscape characterization.....	186
5.4.2	Modeling the dynamics of agricultural yield responses	191
5.4.3	Modeling the dynamics of stand basal area.....	198
5.4.4	Calibration of the <i>NaturalTransition</i> sub-model	204
5.5	Conclusions	205
6	INTERGRATED SCENARIOS OF LAND-USE/COVER CHANGES AND IMPACT ASSESSMENT OF LAND-USE POLICIES IN HONG HA WATERSHED	210
6.1	Introduction	210
6.2	Land-use policies in Hong Ha: overall setting and puzzle decision points	213
6.2.1	Forest protection zoning	215
6.2.2	Agricultural extension	218

6.2.3	Access to agrochemical subsidy	219
6.3	Methodology	219
6.3.1	Defining tested land-use policy interventions	219
6.3.2	Developing an operational VN-LUDAS for policy decision purposes	222
6.4	Results	226
6.4.1	VN-LUDAS as a tool for visualizing and testing the impacts of land-use policy interventions	226
6.4.2	Impacts of protection zoning policy on land use/cover and socio- economic status	232
6.4.3	Impacts of agricultural extension on LUCC and community dynamics.....	237
6.4.4	Impacts of agrochemical subsidies on LUCC and community dynamics	242
6.4.5	Combinational policy impacts on LUCC and socio-economic dynamics	249
6.5	Conclusions	254
7	CONCLUSIONS AND RECOMENDATIONS	256
7.1	Conclusions	256
7.2	Limitations	262
7.3	Recommendations	263
8	REFERENCES	268
