Contents

1 Introduction **1**

2 Instabilities in a nematic liquid crystal **7**

2.1 General description of nematic liquid crystals 7

2.2 The Fréedericksz transition 10

2.2.1 Domain walls 12

2.2.2 Displays 12

2.3 Electroconvection 13

2.3.1 Simple theoretical model 15

2.4 N.L.C. with slightly positive ϵ_a 18

3 Set–up, techniques and materials **21**

3.1 Experimental set–up 21

3.2 Camera and experimental computer control 25

3.3 Detection of the primary instabilities 27

3.3.1 The Fréedericksz transition 27

3.3.2 Electroconvection 30

3.4 The liquid crystals 32

3.4.1 ZLI–3086 32

3.4.2 Mixtures of MBBA and 5CB 33

3.5 Preparation of a liquid crystal gel cell 39

4 Transformation from walls to lines **41**

4.1 Experiments 44

4.1.1 Twisted Fréedericksz wall 44

4.1.2 Pincement 46

4.2 Pincement model 52

4.2.1 Simple theoretical description 52

4.2.2 Bifurcation diagram 56

4.3 Comparison with the simulation results 58

4.3.1 Simulation setup 58

4.3.2 Twisted Fréedericksz wall 59

4.3.3 Pincement 59

5 The corkscrew instability **65**

5.1 Measurement procedures 67

5.1.1 Jump procedure 67

5.1.2 Extraction of the domain wall 68

5.1.3 Measurements for increasing amplitude 70

5.2 The amplitude equation 71

5.3 The phase diagram 77

5.3.1 General considerations 77

5.3.2 Dependence on the dielectric anisotropy 80

5.3.3 Dependence on the conductivity 85

5.3.4 Dependence on the cell thickness 87

5.4 Simple theoretical model 91

5.4.1 The model 91

5.4.2 Comparison with the experiments 99

5.5 Open questions 102

6 Switching of a cholesteric gel **105**

6.1 Static properties 108

6.1.1 Qualitative overview 108

6.1.2 Quantitative measurements 110
6.2 Dynamic response 116
6.2.1 Evolution of the fingerprint pattern 116
6.2.2 Tilting of the director (Fréedericksz transition) 118
6.2.3 Discussion of the growth rates 122

7 Summary and conclusions **125**
