Summary i

1 General Introduction 1

1.1 Principal objective of the study 1

1.2 Phosphorus forms in soil 1

1.3 Phosphorus fixation 2

1.4 Phosphorus transformation and availability in soils 2

1.5 Phosphorus fractions defined by the extractants 3

1.6 General hypothesis and objectives of the study 5

2 Shifts in phosphorus fractions in the long-term experiments at the loamy soil of Reinshof and at the sandy soils of Eickeloh, Düshorn and Hodenhagen 8

2.1 Introduction 8

2.2 Materials and methods 9

2.2.1 Experimental sites 9

2.2.2 Experimental design 10

2.2.3 Soil sampling 12

2.2.4 Analytical procedure 12

2.2.4.1 Phosphorus fractionation 12

2.2.4.2 Determination of separate total-P 13

2.2.4.3 Phosphorus balance 14

2.2.5 Data analysis 15

2.3 Results 16

2.3.1 Changes in P fractions as related to P fertilization and long-term cropping at Reinshof 16

2.3.1.1 $NaHCO_3$–P_i 16

2.3.1.2 $NaHCO_3$-P_o 19

2.3.1.3 NaOH-P_i 20

2.3.1.4 NaOH-P_o 21

2.3.1.5 HCl-P 22

2.3.1.6 Conc. HCl–P 23

2.3.1.7 Residue-P 24
2.3.1.8 Total-P....25
2.3.1.9 Separate total-P 26
2.3.1.10 P balance....26
2.3.2 Changes of P fractions as related to P fertilization and long-term cropping at acid sandy soils in Eickeloh, Düshorn and Hodenhagen....27
2.3.2.1 $NaHCO_3$-P_i 27
2.3.2.2 $NaHCO_3$-P_o 29
2.3.2.3 NaOH-P_i 30
2.3.2.4 NaOH-P_o 31
2.3.2.5 HCl-P....32
2.3.2.6 Conc. HCl-P and residue-P 33
2.3.2.7 Total-P and separate total-P 33
2.4 Discussion.... 34
3 Short-term P depletion of different P fractions in the rhizosphere and its comparison to the depletion pattern induced by artificial P removal from the soil solution.... 42
3.1 Introduction 42
3.2 Material and methods.... 45
3.2.1 Design of the experiment 45
3.2.2 Preparation of pots and fertilization....46
3.2.3 Two compartment tube for rhizosphere soil collection 46
3.2.4 Seedling preparation and planting....48
3.2.5 Rhizosphere soil sampling 49
3.2.6 Plant Analysis....49
3.2.6.1 Harvest and P determination....49
3.2.6.2 Root length (RL)....50
3.2.6.3 The P influx (In)....50
3.2.7 Soil analysis 51
3.2.7.1 Concentration of P in soil solution 51
3.2.7.2 Determination of Calcium-Acetate-Lactate P (CAL-P) 51
3.2.7.3 Soil P fractionation in the rhizosphere....52
3.2.8 Artificial P removal from the soil solution....52
3.2.8.1 Iron oxide impregnated filter paper....52
3.2.8.2 Phosphorus adsorbing property of the Fe-strip 52
3.2.8.3 Phosphorus desorption from the soil sample by the Fe-strips....53
3.2.9 Statistical Analysis 54
3.3 Results 55
3.3.1 Maize 55
3.3.1.1 Absolute and relative dry matter yield of maize....55

3.3.1.2 Phosphorus concentration in soil solution and CAL-P as related to soil type, P fertilizer and plant age.....56
3.3.1.3 Shoot P concentration, root length and root length/shoot weight ratio of maize as related to soil type, P fertilizers and plant age. 58
3.3.1.4 Phosphorus uptake and P influx by maize as related to soil type, P fertilizer and plant age. 60
3.3.1.5 Changes in the P fractions in the rhizosphere of maize at the first harvest.....61
3.3.1.6 Changes in the P fractions in the rhizosphere of maize at the second harvest.....63
3.3.1.7 Changes in the P fractions in the rhizosphere of maize at the third harvest 65
3.3.2 Oilseed rape.....66
3.3.2.1 Dry matter yield and relative yield of oilseed rape.....66
3.3.2.2 Phosphorus concentration in soil solution and CAL-P as related to soil type, P fertilizer and plant age.....67
3.3.2.3 Shoot P concentration and pod P concentration in oilseed rape as related to soil type, P fertilizer and plant age.....69
3.3.2.4 Root length and root length-shoot weight ratio of oilseed rape as related to soil type, P fertilizer and plant age. 70
3.3.2.5 Phosphorus uptake and P influx by oilseed rape as related to soil type, P fertilization and plant age. 72
3.3.2.6 Changes in the P fractions in the rhizosphere of oilseed rape at the first harvest.....73
3.3.2.7 Changes in the P fractions in the rhizosphere of oilseed rape at the second harvest.....74
3.3.2.8 Changes in the P fractions in the rhizosphere of oilseed rape at the third harvest 76
3.3.3 Soil P depletion induced by artificial removal of P from the soil solution (Fe-strip) 77
3.3.3.1 Changes in the P fractions from bulk soil after depleting by maize roots or Fe-strip at 70 days after transplanting 77
3.3.3.2 Changes in the P fractions from bulk soil after depleting by oilseed rape roots or Fe-strip at 56 days after transplanting 79
3.4 Discussion..... 81

4 Conclusions..... 89

5 References..... 90

6 Appendices..... 102
