CONTENTS

1	<i>Synopsis</i>	1
2	<i>Introduction</i>	3
2.1	What is a novelty filter?	3
2.2	Novelty filter microscope and its relevance	5
2.3	Objectives of this work	6
2.4	Structure of the thesis	7
3	<i>A review of the photorefractive effect</i>	10
3.1	A short introduction to the photorefractive effect	10
3.2	The band-transport model of the photorefractive effect	11
3.2.1	Incident intensity pattern	12
3.2.2	Derivation of Kukhtarev's equations	14
3.2.3	Steady-state solution	15
3.2.4	Transient solution under small modulation approximation	18
3.2.5	Formation of the refractive index grating	20
3.2.6	Interaction of light with the grating	21
3.3	Two-beam coupling	23
3.4	Beam-fanning	24
3.5	Four-wave mixing	25
4	<i>Two-beam coupling and interference model</i>	27
4.1	One-dimensional two-beam coupling differential equations	27
4.2	Stationary solution of two-beam coupling	28
4.3	Steady state refractive index grating	30
4.4	Improved interference model of two-beam coupling	31
4.4.1	Pure amplitude coupling	38
4.4.2	Pure phase coupling	38
4.4.3	Unit modulation	39
4.4.4	Validity of the model	40

4.5	Transient solution of two-beam coupling	41
4.5.1	Grating dynamics	41
4.5.2	Transient energy transfer	44
4.5.3	Relationship between different time constants	48
5	<i>Two beam coupling photorefractive novelty filter</i>	50
5.1	Two-beam coupling response for a step input	50
5.1.1	An amplitude change	50
5.1.2	A phase change	52
5.2	Novelty filter based on two-beam coupling	53
5.3	Instantaneous response! Is it physically possible?	55
5.4	Characteristics of the novelty filter	56
5.4.1	Amplitude contrast of the novelty filter	56
5.4.2	Phase contrast of the novelty filter	60
5.5	Temporal response of the novelty filter	62
5.5.1	Continuous amplitude changes	63
5.5.2	Continuous phase changes	65
6	<i>The photorefractive novelty filter microscope</i>	67
6.1	Novelty filter for microscopy	67
6.2	Microscope system I	69
6.3	Microscope system II	72
6.4	Microscope system III	76
7	<i>Trail formation</i>	79
7.1	Origin of trail formation	79
7.2	Theory of trail formation	81
7.2.1	Bright object moving in a dark background	82
7.2.2	Dark object moving in a bright background	84
7.2.3	Phase object moving under constant illumination	89
7.2.4	Validity of the trail expressions	92
7.2.5	Verification based on numerical simulations	94
7.3	Application of trail formation	95
8	<i>Manipulation of trail</i>	99
8.1	Features of trail formation	99
8.2	Trail in NFM	101
8.3	Suppression of trail	103
8.3.1	Using the intensity dependence	103

CONTENTS

8.3.2	Using a LiNbO ₃ crystal	105
9	<i>Phase sensitivity of NFM</i>	111
9.1	Phase transfer function of NFM	111
9.2	Real-time phase sensitivity from 0 to π radians	112
9.2.1	Determination of PTF using a phase modulator	112
9.2.2	Determination of PTF using a piezo-based mirror	113
9.2.3	Phase measurement resolution	114
9.3	Extension of phase measurement range to 0 to 2π radians	115
9.3.1	The idea	115
9.3.2	Experimental implementation	116
9.3.3	Verification via numerical simulations	118
9.3.4	Results	118
9.3.5	Duration of the phase trigger	121
9.3.6	Phase triggering technique versus Phase-shifting interferometry	122
9.4	Extension of phase measurement range beyond 2π radians	123
9.4.1	The idea	123
9.4.2	Theoretical estimate of phase measurement range	125
9.4.3	Realistic estimate of phase measurement range	125
9.4.4	Experimental realization and preliminary results	127
9.5	Phase contrast microscopy vs Novelty filter microscopy	129
10	<i>Point spread function of NFM</i>	131
10.1	Figures-of-merit of an imaging system	131
10.2	Point spread function of an imaging system	132
10.2.1	Spatial resolution	134
10.2.2	Depth of field	134
10.3	Point spread function with background intensity	135
10.3.1	Spatial resolution	136
10.3.2	Depth of field	137
10.4	Intensity point spread function of NFM	138
10.4.1	Spatial resolution	142
10.4.2	Depth of field	143
11	<i>Application of NFM in Biology</i>	146
11.1	Unique features of NFM for biological microscopy	146
11.1.1	Real-time change detection	146
11.1.2	Real-time phase sensitivity	147

11.1.3 Contrast improvement	147
11.1.4 Non-invasive observation	148
11.1.5 In vivo motion detection	148
11.2 Real-time motion detection and contrast enhancement	149
11.3 Observation of characteristic movements	150
11.4 Efficient tracking of individual microorganisms	151
11.5 Observation of processes occurring in microorganisms	152
11.6 Study of biological flow currents	153
11.6.1 Pre-processing of video data for contrast improvement . . .	154
12 <i>Application of NFM in Fluid dynamics</i>	158
12.1 Fluid flows in micro-channels	158
12.2 Design and development of micro-channels	160
12.2.1 Prototype 1	160
12.2.2 Prototype 2	161
12.2.3 Prototype 3	162
12.3 Study of flows in micro-channels	163
12.3.1 Observing the fluid flow in barium titanate modus	164
12.3.2 Measuring the density changes in lithium niobate modus . .	165
13 <i>Summary and Future perspectives</i>	169
13.1 Summarizing	169
13.1.1 Theoretical investigations	169
13.1.2 Experimental results	170
13.2 Looking further	172
A <i>Effective electro-optic coefficients</i>	174
A.1 Pockel's effect	174
A.2 Electro-optic coefficients	176
A.3 Calculation of r_{eff}	178
B <i>Phase characteristics of LCD</i>	181
B.1 LC2002: The liquid crystal display	181
B.2 Phase characteristics	182
B.3 Phase-only mode	183
B.4 Experimental results	185
C <i>List of publications</i>	188
C.1 Journal articles	188

CONTENTS

C.2	Review articles	188
C.3	Conference proceedings	189
C.4	Important presentations and posters	189
