Abstract	1
1 Introduction	7
1.1 The Solar Atmosphere	7
1.1.1 The Radiative Core and the Convection Zone	7
1.1.2 The Photosphere	8
1.1.3 The Chromosphere	11
1.1.4 The Transition Region	11
1.1.5 The Corona	14
1.1.6 The Solar Wind	16
1.2 Magnetic Loops in the Solar Corona	17
1.2.1 Theoretical Concept	17
1.2.2 Observations of Coronal Loops	18
1.2.3 Loop Models	21
1.3 Motivation and Scope of this Work	22
2 Model Equations and their Solution	25
2.1 Model Equations	25
2.2 Implicit Integration Methods	27
2.2.1 Implicit Integration of First-Order Partial Differential Equations	27
2.3 Conservative Methods	28
2.4 Upwind Schemes	28
2.5 Staggered Grid	31
2.6 Boundary Conditions	32
2.7 Conservation Laws on an Adaptive Mesh	33
2.7.1 Examples	35
2.8 Implementation of an Adaptive Grid	36

2.9	Solving the Model Equations	38
3	Emission Line Spectroscopy	43
3.1	Atomic Processes	43
3.1.1	Important Atomic Processes in the Transition Region and Corona	45
3.2	Formation of Optically-Thin Emission Lines	46
3.2.1	Excitation and Deexcitation	47
3.2.2	The Two-Level Atom Approximation	50
3.2.3	Ionization	51
3.2.4	Atomic Data	51
3.2.5	The Spectral Line Profile	52
4	Plasma Condensation in Cool Loops	55
4.1	Introduction	55
4.2	Loop Heating	58
4.3	Results: Condensation due to Thermal Instability	59
4.3.1	Initial State	59
4.3.2	Loop Evolution	60
4.3.3	Energy Balance Analysis	62
4.3.4	The Role of the Damping Length	64
4.3.5	Limit Cycle of Loop Evolution	68
4.3.6	Remarks on Rayleigh-Taylor Instability	70
4.3.7	Spectral Signature of Condensation in Transition Region Lines	71
4.4	Discussion	72
5	Catastrophic Cooling and High-Speed Downflows	75
5.1	Introduction	75
5.1.1	Loop Heating	77
5.1.2	Initial State	77
5.2	Plasma Condensation due to Thermal Instability	77
5.3	Results	81
5.3.1	Different Types of Loop Evolution	81
5.3.2	Classification of Loop Evolution	85
5.3.3	Where in a Coronal Loop do Condensation Regions Form?	85
5.3.4	Formation of a Shock Front	90

5.3.5	Velocity Profiles and Acceleration of the Condensation Region	91
5.3.6	Spectral Signature of Catastrophic Cooling and Downflows	94
5.4	Comparison to Observations and Discussion	98
5.5	Summary	101
6	High-Speed Coronal Rain	103
6.1	Introduction	103
6.1.1	Loop Heating	104
6.1.2	Initial State	105
6.2	Effect of the Damping Length on the Loop Evolution . . .	106
6.2.1	Recurrent Condensations in Long Loops	106
6.2.2	Slow and Fast Blobs	107
6.2.3	Formation of the Second Condensation Region . . .	111
6.3	Comparison with Observations	113
6.4	Spectral Signature of Fast Downflows	117
6.4.1	Footpoint Brightening	119
6.5	Summary	121
7	Coronal Loops as Non-Linear Systems	123
8	Families of Loops: A Parameter Study	127
8.1	Introduction and Setup	127
8.2	Classes of Solutions and Periods	129
8.3	Temperature and Density Variations	131
8.4	Overheated Loops	135
8.5	Comparison with Hydrostatic Models	138
8.6	Plots of Loop-Averaged Variables	139
8.6.1	Time Evolution of Mean Temperature	141
8.6.2	Pressure-Temperature Diagrams	146
9	Recent Multi-Wavelength Observations of Coronal Loops	151
10	Discussion & Outlook	159
A	Appendix	165
A.1	Effect of Atomic Composition on Instabilities in Shock Waves	165

A.2	Further Data From the Parameter Study	167
A.2.1	Time Evolution of Mean Electron Density	167
A.2.2	Time Evolution of Mean Pressure	172
A.3	List of Physical Constants	177
	Bibliography	178
