| <b>Acknowledgments</b>                                     | <b>vii</b> |
| <b>Abstract</b>  | <b>ix</b>  |
| <b>Zusammenfassung</b>                                     | <b>xi</b>  |
| <b>1 Introduction</b>                                      | <b>1</b>   |
| 1.1 CAD for MEMS . . . . .                                 | 1          |
| 1.2 State of the Art . . . . .                             | 4          |
| 1.3 Major Results . . . . .                                | 7          |
| 1.4 Organization of the Dissertation . . . . .             | 9          |
| <b>2 Lagrangian Continuum Model</b>                        | <b>11</b>  |
| 2.1 Lagrange Formalism and Variational Principle . . . . . | 12         |
| 2.2 Material Frame vs. Spatial Frame . . . . .             | 18         |
| 2.3 Elastic Deformation Lagrangian . . . . .               | 21         |
| 2.4 Electrodynamic Lagrangian . . . . .                    | 33         |

## **CONTENTS**

---

|          |  |           |
|----------|--|-----------|
| 2.4.1    | Spatial Formulation . . . . .                              | 33        |
| 2.4.2    | Material Formulation . . . . .                             | 42        |
| 2.5      | Derivation of the Coupled Equations of Motion . . . . .    | 50        |
| <b>3</b> | <b>Discretization Techniques</b>                           | <b>53</b> |
| 3.1      | Discretization Process . . . . .                           | 53        |
| 3.2      | Weak Form of the Lagrangian Equation . . . . .             | 55        |
| 3.3      | The Finite Element Method . . . . .                        | 56        |
| 3.3.1    | Conforming Elements and Isoparametric Mappings . . . . .   | 59        |
| 3.3.2    | Non-conforming Elements . . . . .                          | 63        |
| 3.4      | Spatial Discretization of Lagrangian Formulation . . . . . | 67        |
| 3.4.1    | Elastic Deformation Lagrangian . . . . .                   | 69        |
| 3.4.2    | Electrodynamic Lagrangian . . . . .                        | 71        |
| 3.4.3    | Generalized Force . . . . .                                | 78        |
| <b>4</b> | <b>Model Order Reduction</b>                               | <b>81</b> |
| 4.1      | Problem formulation . . . . .                              | 81        |
| 4.2      | Control Theory Preliminaries . . . . .                     | 84        |
| 4.3      | Model Order Reduction of Linear System . . . . .           | 92        |
| 4.3.1    | Galerkin Projection . . . . .                              | 93        |
| 4.3.2    | Moment matching . . . . .                                  | 94        |
| 4.3.3    | Truncated Balanced Realization . . . . .                   | 102       |
| 4.4      | Model Order Reduction of Nonlinear System . . . . .        | 104       |

## CONTENTS

|                        |   |            |
|------------------------|---|------------|
| 4.4.1                  | Proper Orthogonal Decomposition . . . . .               | 105        |
| 4.4.2                  | Quadratic Expansion Method . . . . .                    | 106        |
| <b>5</b>               | <b>A Mathematica<sup>®</sup> Package Implementation</b> | <b>109</b> |
| 5.1                    | The Mathematica Perspective . . . . .                   | 109        |
| 5.2                    | Structure of LCModel . . . . .                          | 111        |
| 5.3                    | Numerical Examples . . . . .                            | 113        |
| <b>6</b>               | <b>Conclusion</b>                                       | <b>119</b> |
| <b>List of Symbols</b> |   | <b>121</b> |
| <b>References</b>      |   | <b>127</b> |
