Contents

List of Figures	v
List of Tables.....	viii
1. Introduction	1
1.1 <i>Current state of forest management planning.....</i>	2
1.2 <i>General scenario modeling techniques.....</i>	8
1.2.1 Area Change Models	8
1.2.2 Rule-Based Modeling.....	9
1.2.3 A model for any type of forest management.....	10
1.3 <i>Determining operation preferences.....</i>	11
1.3.1 Hierarchical prioritization	11
1.3.2 Final preference ratings (objective function coefficients)	14
1.4 <i>Forest growth model.....</i>	15
1.4.1 Role of growth model.....	15
1.4.2 Definition of growth model.....	16
1.4.3 Types of growth models	18
1.5 <i>Thinning model.....</i>	21
1.5.1 Hart's thinning model.....	21
1.5.2 Murray and Gadow's separation parameter.....	21
1.5.3 Alder's thinning model	21
1.5.4 NG ratio	22
1.6 <i>Objectives of this thesis.....</i>	22
1.6.1 Stand level growth model with topographic data	23
1.6.2 Forest management planning with heuristic method on stand level.....	23
1.6.3 Single-tree growth model with topographic data	24
1.6.4 Development of competition index for mixed forest	25
2. Dynamic stand growth model with topographic data	27
2.1 <i>Introduction.....</i>	27
2.2 <i>Material.....</i>	28
2.2.1 Stand growth data	28
2.2.2 Stand topographic data	29
2.3 <i>Method.....</i>	30

2.3.1	Flow of the dynamic growth model.....	30
2.3.2	Dominant tree height and site index of stand	31
2.3.3	Thinning method	32
2.3.4	Volume function	33
2.3.5	Change of stand structure after thinning	33
2.3.5.1	Change of the quadratic mean DBH after thinning.....	34
2.3.5.2	Change of mean height after thinning	34
2.3.5.3	Change of stem number per ha after thinning.....	35
2.3.5.4	Estimation of products after thinning	35
2.3.6	Stand growth to the next period	36
2.3.6.1	Height growth to the next period	36
2.3.6.2	The quadratic mean DBH growth to the next period.....	37
2.3.6.3	Change of the number of trees per ha to the next period	38
2.3.6.4	DBH modification in case of mortality	40
2.4	<i>Results</i>	42
2.4.1	Estimation of coefficients	42
2.4.2	Dominant tree growth under each site index.....	43
2.4.3	Growth projection with dynamic growth model.....	44
2.4.3.1	Thinning intensity and stand growth	48
2.4.3.2	Thinning cycle and stand growth	50
2.4.4	Management planning	52
2.4.5	Model's limitation and recommendation for future study.....	53
3.	Stand level forest management planning with heuristic method	56
3.1	<i>Introduction</i>	56
3.2	<i>Material</i>	57
3.3	<i>Method</i>	59
3.3.1	Growth model	59
3.3.2	Thinning model.....	61
3.3.3	Generating silvicultural paths	63
3.3.4	Objective function	66
3.3.5	Constraint.....	67
3.3.6	Optimization method	68
3.3.6.1	Linear programming	69
3.3.6.2	Simulated annealing.....	70
3.3.6.3	Genetic algorithm.....	73
3.3.6.4	Tabu Search	75

3.3.6.5	Modified Accelerated Simulated Annealing.....	77
3.3.7	Whole process	79
3.3.8	Optimization system – OSys	80
3.4	<i>Results</i>	82
3.4.1	Optimization.....	82
3.4.2	Constraint.....	84
4.	Single tree growth model with topographic data	86
4.1	<i>Introduction</i>	86
4.2	<i>Material</i>	87
4.3	<i>Methods</i>	89
4.3.1	Model structure	89
4.3.1.1	Radial increment as a dependent variable	90
4.3.1.2	Age component	90
4.3.1.3	Tree size component.....	90
4.3.1.4	Competition component	91
4.3.1.5	Site quality component	92
4.3.2	Radial increment and diameter growth model	93
4.3.3	Model fitting and statistical analysis	94
4.4	<i>Results and discussion</i>	95
4.4.1	Appearance frequencies by tree species.....	95
4.4.2	Statistical performance of the models	96
4.4.3	Plausibility of effects of independent variables	98
4.4.3.1	Tree age.....	99
4.4.3.2	Tree size	100
4.4.3.3	Competition	101
4.4.3.4	Growing site	101
4.4.4	Evaluation of growth projection	103
4.4.4.1	Interaction effects of independent variables	103
4.4.4.2	DBH growth prediction	109
4.4.4.3	Stand dynamic prediction	110
4.4.5	Applicability of the model.....	111
5.	Development of new competition index for mixed forest	113
5.1	<i>Introduction</i>	113
5.2	<i>Material</i>	113

<i>5.3 Method</i>	115
5.3.1 Competition indices.....	115
5.3.2 The CWH- competition index	116
5.3.3 Application in DBH increment model.....	118
<i>5.4 Results</i>	119
5.4.1 Correlation	119
5.4.2 Analysis of variance (ANOVA).....	120
5.4.3 Application in radial increment model.....	120
6. Discussion	122
6.1 <i>Dynamic stand growth model with topographic data</i>	122
6.2 <i>Stand level forest management planning with heuristic method</i>	123
6.3 <i>Single tree growth model with topographic data</i>	125
6.4 <i>Development of new competition index for mixed forest</i>	126
6.5 <i>The comprehensive discussion</i>	128
7. Summary	131
8. Zusammenfasung	135
9. References	140
10. Appendix	147
11. Curriculums Vitae	153
