Contents

1	Introduction	1
1.1	Motivation	1
1.2	Modeling of Incompressible Flows	2
1.3	Modeling of Compressible Flows	3
1.4	Methods Involved	4
1.5	Previous Work	4
2	Fundamentals of Turbulence	5
2.1	Navier-Stokes Equations	5
2.2	Non Dimensional Form	6
2.3	Statistical Averaging	7
2.3.1	Reynolds Averaging	8
2.3.2	Favre Averaging	9
2.4	Averaged Transport Equations	10
2.4.1	Two-Point Correlation Equations	14
2.5	Turbulence Modeling	22
2.6	Compressible Turbulence	25
2.6.1	Dissipation of Compressible Flows	26
2.6.2	Low Mach Number Regime	30

2.6.3	Linear Theory of Compressible Flow	31
2.7	Low Mach Number Asymptotic	36
3	Symmetries and similarity analysis	43
3.1	Introduction to Symmetry Analysis	43
3.2	Computer Algebra Systems	44
3.3	Symmetry Transformations	45
3.4	Invariant Functions	48
3.5	Procedure of Finding Symmetries	50
3.6	Symmetries of Fluid Flow	52
3.6.1	Incompressible Flow	52
3.6.2	Compressible Flow	54
3.6.3	Low Mach Number Compressible Flow	62
3.7	Homogeneous Turbulence	78
3.8	Similarity Laws	79
3.9	Analytical Results	79
3.9.1	Isotropic Decaying Turbulence	79
3.9.2	Inhomogeneous Turbulence	85
3.9.3	Homogeneous Sheared Turbulence	85
3.10	Symmetries of Two Equation Turbulence Models	87
4	Direct Numerical Simulation	93
4.1	Numerical Method	93
4.1.1	Choice of Method	94
4.1.2	Spatial Differencing	94
4.1.3	Conservation Properties	96
4.1.4	Time Advancement	96

4.1.5	Re-meshing / Moving Grid	98
4.1.6	Initial Conditions	100
4.2	Numerical Results	103
4.2.1	Isotropic Decaying Turbulence	107
4.2.2	Homogeneous Sheared Turbulence	111
5	Conclusions	123
6	Bibliography	127
A	Introduction into Lie-Group Theory	135
A.1	Motivation and Definitions	136
A.2	Transformation Groups	139
A.3	Infinitesimal Transformations	141
A.4	Invariant Functions	144
A.5	Prolongation and Invariance of Differential Equations	146
A.6	Invariant Solutions / <i>Similarity Solutions</i>	160
A.7	List of Important Transformation Groups	163
B	Derivation of Generalized Fundamental Equations for Isotropic Turbulence	165
B.1	Dynamic Transport Equation of the Velocity Correlation Functions	166
B.2	Derivation of the Linear, Bilinear and Trilinear Forms in Isotropic Turbulence	166
B.2.1	Derivation of the Linear Form	167
B.2.2	Representation of the Bilinear Form R_{ij}	168
B.2.3	Derivation of the Trilinear Form	172
B.2.4	Pressure Part	172
B.2.5	Instantaneous Part	173

B.3	Final Form of the von Kármán Howarth Equation of Compressible Flow	173
B.4	Temperature Correlation Function	175
B.5	Kolmogorov's Theory	177
B.5.1	Incompressible Turbulent Flow	177
B.5.2	Compressible Turbulent Flow	178
B.6	Low Mach Number Regime	182
B.7	Transport Equation of Total Energy	183
B.8	First Similarity Hypothesis	184
B.9	Second Similarity Hypothesis	185
B.10	Deductions from the Correlation Functions	186
B.11	Assumptions for the above Derivations	186
B.12	Closure of the Triple Correlation	186
B.13	Derivation of the Decay Rate of Turbulent Kinetic Energy	187
B.14	Numerical Analysis of Generalized Fundamental Equations	188
B.15	Outlook	189
C	Characteristic Solution of Partial Differential Equations	191
C.1	Linear Partial Differential Equation of First Order	191
C.2	Quasi-linear Partial Differential Equation	193
C.2.1	Example	194
D	Favre and Reynolds Averaging	197
E	Curriculum Vitae	201
