Preface

This work was developed during my position as a research assistant at the Lehrstuhl und Institut für Technische Mechanik der Rheinisch-Westfälischen Technischen Hochschule in Aachen, Germany.

I am deeply indebted to the head of the institute Univ.-Prof. Dr.-Ing. Dr.h.c. Dr.E.h. Norbert Peters for the valuable and constructive discussions as well as his scientific and private advice and the great independence that helped the completion of this work. He also supported my research conducted at the University of California San Diego and Stanford University.

Univ.-Prof. Dr.-Ing. Martin Oberlack brought the symmetry methods into my work. They had a deep impact on the current research. Therefore I am thankful that he brought my attention to these methods and helped my research in intense and valuable discussions.

With many thanks for all the members of the Insitut für Technische Mechanik, that supported me during this research work. My parents made this work possible by their continued support and encouragement.

I am most thankful to my friend Carola Minko for her support, patience and love.
