Contents

Abstract **5**

Zusammenfassung **7**

1 Introduction **15**
1.1 Motivation 15
1.2 Scope of this Work 17

2 Theoretical Background **19**
2.1 II-VI Nanowires 19
2.2 Effective Mass Approximation 22
2.3 Electrical Measurements on Contacted MSM Structures 26
2.3.1 Schottky and Ohmic Contacts 26
2.3.2 Solar Cell 27

3 Experimental Methods **33**
3.1 Synthesis 33
3.2 Optical Setup 36
3.2.1 Argon-Krypton Laser 38
3.2.2 Supercontinuum Laser 39
3.2.3 Beam Formation 39
3.2.4 Microscope 41
3.2.5 Detection Path 44
3.3 Electrical Measurements 49
3.3.1 Lithography 49
3.3.2 Electrical Characterization 51
3.4 Additional Measurements 54
3.4.1 Atomic Force Microscopy 54
3.4.2 Transmission Electron Microscopy 55

4 Diameter scaling of the optical band gap in individual CdSe Nanowires **59**
4.1 Individual CdSe Nanowires 59
4.1.1 Sample Preparation 59
4.1.2 Correlation between Structure and Optical Properties . 60

4.1.3 Modeling of the Band Gap Energy 63
4.2 Effective Band Gap and Crystal Structure 66
4.3 Heterostructures of Carbon Nanotubes and CdSe Nanowires . 68
4.3.1 Synthesis 68
4.3.2 Optical Properties of CNT-Bi-CdSe Heterostructures . 69

5 Photosensing Devices from CdS Nanowires 75
5.1 Sample Preparation 75
5.2 Optoelectrical Characterization of Au-CdS-Ti Devices 76
5.3 Photocurrent Microscopy on Individual CdS NWs 81
5.3.1 Schottky Junction-Based Photovoltaics 81
5.3.2 Competitive Exciton Decay 84

6 Photovoltaics 91
6.1 CdSe-P3HT Solar Cells 91

7 Summary & Outlook 99
