TABLE OF CONTENTS

I. List of Figures……..…(viii)
II. List of Tables……...(x)

1. Introduction……1
1.1. Reconfigurable Wireless Ad Hoc Networks……..1
1.2. Problem Statement and Motivation……2
1.3. Objectives……..…..3
1.4. Related Work……..4
1.5. Scope and limitations……..5
1.6. Organization of the dissertation……..6

2. General overview and problem statement……8
2.1. Features and Characteristics of Ad Hoc routing protocols……8
2.1.1. Qualitative and quantitative features……...8
2.1.2. Mobility patterns and characteristics……...9
2.1.3. Major requirements and challenges in Ad Hoc Routing Protocols ……9
2.2. Classification of Ad hoc routing protocols……...10
2.2.1. Proactive Routing Protocols……..12
2.2.2. Reactive routing Protocols……15
2.2.3. Comparison of Reactive and Proactive approaches……...21
2.2.4. Hybrid Routing approach……...22
2.2.5. Comparison Reactive and Proactive with hybrid……...…28
2.3. Routing Overheads in RWAdhocNets……..28
2.3.1. Effects of RO……30
2.3.2. Controlling RO……..30
2.4. Other Issues in Ad Hoc Routing……...…31
2.4.1. Security considerations of Ad Hoc Routing Protocols……..31
2.4.2. Quality of Service (QoS) issues……32
2.4.3. Mac Control……...33
2.5. Summary……...34
2.6. Performance Evaluation of "winning" Routing Protocols……...36
2.6.1. Simulation Models……36
2.6.2. Performance Metrics……..37
2.6.3. Implementation proceedings……..38
2.6.4. Analysis of results……..40
2.6.5. Performance of different protocols……41
2.7. Summary and Conclusions……...44

3. Mobility Based Routing Overhead Management schemes……46
3.1. Introduction……...46
3.1.1. Effect of hello messages in pro- and reactive ad hoc routing protocols…46
3.2. Link Availability Forecast Schemes……47
3.2.1. Motion parameters based Link availability forecast……..48
3.2.2. Energy based link availability forecast……..54

3.2.3. Hybrid parameter-based approach……54
3.3. Integration of Link availability into Ad Hoc Routing Protocols……..55
3.3.1. AODV with Link Availability forecast (AODV_LA)……...56
3.3.2. ZRP with link Availability forecast (ZRP_LA)……57
3.4. Location guided (Network Level) Routing Overhead Management Schemes……59
3.4.1. Flooding……59
3.4.2. Cone-shaped route search field definition scheme……60
3.4.3. Network Level RO reduction scheme……64
3.4.4. Modifications of the scheme……70
3.5. Integration of RO management scheme on typical Ad hoc Routing protocols…70
3.5.1. AODV with RO management scheme……...70
3.5.2. Basic algorithm of AODV_RO……..71
3.6. Route reliability forecast and Topology Maintenance schemes……...75
3.6.1. Route Selection Strategies……75
3.6.2. Reliability determined by multiple properties……...76
3.6.3. Topology Maintenance……..76
3.7. Chapter summary and Conclusions……..77

4. Evaluation of proposed schemes……...78
4.1. Simulation Environment……...78
4.2. Simulation Methodology……..78
4.2.1. Mobility Model……..78
4.2.2. Scenario……..79
4.3. Simulation Results……80
4.3.1. Link Availability forecast……..80
4.3.2. Network level RO schemes……82
4.3.3. Combination scheme……..85
4.3.4. Efficiency and Performance……...87
4.3.5. Accuracy of results……91
4.4. Results analysis……93
4.5. Summary and Conclusions……...94

5. Implementations, Application classes and Areas……96
5.1. Implementations of common routing protocols……96
5.2. Application classes and areas……...96
5.2.1. Emergency services and Rescue operations……..97
5.2.2. Application in Sensor networks……98
5.2.3. Commercial and civil applications……..…...99
5.2.4. Military Applications……...100
5.2.5. Other targeted application areas……...101
5.3. Chapter summary……...….101

6. Conclusions and Future Work……102
6.1. Summary and Accomplishment……..102
6.2. Conclusions……103

6.3. Future research……..…….104

References…….……..……103

APPENDIX I…….……109
⋐# Abbreviations…….……..109

APPENDIX II…….……111
⋐# Simulation tools……...111
⋐# Simulation Platform…….111
⋐# The NS-2……..111
⋐# Installation of Ns-2……..112
⋐# Understanding the basics involved in ns-2 simulations……...113
⋐# The OTcl/C++ environment…….113
⋐# Network Components……..113
⋐# Mobile networking……...113
- o Mobile nodes……114
- o Packets…….116
- o Timers……..117
- o Agents……..117

⋐# Mobility extension……...118
- o Node Mobility……..118
- o Mac 802.11……..118
- o Radio Propagation models……...118

APPENDIX III……..120

More simulation results…….……..120
