

# Acknowledgments

I would like to express my sincere thanks to my advisor, Prof. Manfred Groll, for the encouragement, support and guidance throughout this work. I deeply appreciate his tireless reading of my many drafts and his valuable input to this thesis. I thank him for his patience and efforts that drove me to give the best of myself. I would also like to thank Prof. H. Müller-Steinhagen for acting as a co-examiner.

My thanks also go to Mr. Rudi Kulenovic, with whom I had many helpful discussions during the whole stage of my work. Rudi helped me so much during the construction of the experimental set-up, which was the hardest time of my work.

I am grateful to Dr. Rainer Mertz and Miss Ewelina Sobierska. Rainer introduced to me the concept of flow boiling and gave me many good suggestions at the beginning of my work. Ewelina helped to carry out part of the experimental work in the last year.

Financial support from the DAAD (Deutscher Akademischer Austauschdienst) is gratefully acknowledged. The Education Ministry of the People's Republic of China and the University of Sichuan gave me the chance to study in Germany, that I really appreciate.

I am greatly indebted to Mr. Patrick Schäfer and to Mr. Yuming Chen. They have provided me with much encouragement and help whenever I needed them most.

I also want to give my thanks to my colleagues and friends for their help inside and outside my academic life. This started from the first day I came to the University of Stuttgart.

Finally, as always, my profound gratitude is due to my Dad, Mom and sister for the understanding, trust and wholehearted support they have been giving to me. Surely I thank my husband for his love and companionship in the past rigorous four years. They gave me the courage and strength to continue my steps along this journey.

Stuttgart, December 2003
