

## TABLE OF CONTENTS

1	GENERAL INTRODUCTION .....	1
1.1	Introduction .....	1
1.2	Research justification .....	3
1.3	Thesis outline.....	4
2	RECENT DEVELOPMENTS.....	5
2.1	Introduction .....	5
2.1.1	Basic definitions .....	5
2.1.2	Factors affecting evapotranspiration .....	6
2.2	Measurement techniques .....	7
2.2.1	Eddy correlation .....	7
2.2.2	Sap flow.....	8
2.2.3	Scintillometry .....	8
2.2.4	Remote sensing.....	9
2.3	Trends in evapotranspiration modeling.....	9
2.3.1	Main concepts.....	10
2.3.2	Evapotranspiration paradigms .....	11
3	STUDY AREA.....	14
3.1	Volta River Basin .....	14
3.2	Climate and Weather .....	15
3.3	Geology, soils and topography.....	17
3.4	Vegetation and agricultural land use .....	18
4	RESEARCH METHODS .....	19
4.1	Introduction .....	19
4.2	In-situ measurements .....	19
4.2.1	Soil moisture and tension monitoring.....	19
4.2.2	Measurement of surface albedo.....	20
4.2.3	Modeling of surface albedo .....	25
4.2.4	Whole-tree water use .....	27
4.2.5	Relations with meteorological variables .....	29
4.2.6	Eddy fluxes.....	32
4.2.7	Time lag estimation .....	32
4.3	Large-scale evapotranspiration estimates.....	33
4.3.1	Model data requirements and sources .....	37
5	SURFACE ALBEDO AND TREE WATER USE .....	40
5.1	Bare-soil albedo.....	40
5.2	Crop field albedo .....	48
5.2.1	Background.....	48

5.2.2	Observed and modeled crop field albedo results.....	50
5.3	Seasonal variation in albedo from different watershed elements.....	58
5.3.1	Background.....	58
5.4	Tree water-use and canopy processes during the dry season .....	61
5.4.1	Background.....	61
5.5	Tree water use and prediction during the rainy season .....	76
5.5.1	Background.....	76
5.5.2	Observed patterns and environmental control.....	77
5.6	Tree and ecosystem water flux during a wet-to-dry transition period.....	89
5.6.1	Introduction .....	89
5.6.2	Xylem flow – eddy flux diurnal relations.....	90
5.6.3	Water flux – climatic forcing temporal dynamics.....	94
5.6.4	Daily estimates of sap flow and eddy fluxes.....	96
5.6.5	Discussion.....	99
6	REGIONAL EVAPOTRANSPIRATION MODELING .....	103
6.1	Background.....	103
6.2	Spatial patterns and the complementarity relationship structure with CRU data...	104
6.3	Monthly patterns of the complementarity relationship components .....	109
6.4	Comparison of actual ET estimates with independent measures .....	126
6.5	Reformulation of the Advection-Aridity models .....	128
6.5.1	ETw recalibration .....	129
6.5.2	Wind function reparameterization.....	133
6.5.3	ETw recalibration using new wind functions.....	138
6.5.4	All-at-once optimization of the AA models .....	140
6.6	Discussion.....	143
6.7	Evapotranspiration and land use.....	148
7	SUMMARY AND CONCLUSIONS.....	151
7.1	Surface albedo .....	151
7.2	Tree water use.....	152
7.3	Regional evapotranspiration.....	153
7.4	Evapotranspiration and land use.....	154
7.5	Conclusions and recommendations .....	155
8	REFERENCES.....	157

## ACKNOWLEDGEMENTS
